28th EVER CONGRESS 9-11 October 2025 Florence

PRELIMINARY PROGRAMME

EVER Board 2025-2026

Executive Committee

President	Christina ZEITZ, Paris (2024-2025)
Secretary General	Thomas FUCHSLUGER, Rostock (2022-2027)
Treasurer	Juana GALLAR MARTINEZ, San Juan de Alicante (2022-2027)
Programme Secretary	Marta AGUDO BARRIUSO, Murcia (2021-2026)
President Elect	Patrick YU WAI MAN, Cambridge (2024-2025))
Vice President	Heli SKOTTMAN, Tampere (2024-2025)
Vice President Elect	Miriam KOLKO, Copenhagen (2024-2025)
Past President	Andrzej GRZYBOWSKI, Poznan/Olsztyn (2024-2025)
EVERf liaison	Andrew DICK, Bristol (2021-2026)

Chair of Sections

ACB: Anatomy / Cell Biology	Anu KAUPPINEN, Kuopio (2024-2029)
COS: Cornea / Ocular Surface	Zisis GATZIOUFAS, Basel (2022-2027)
EOVS: Electrophysiology / physiological Optics / Vision Sciences	Rui BERNARDES, Coimbra (2024-2029)
G: Glaucoma	Miriam KOLKO, Copenhagen (2020-2025)
IM: Immunology / Microbiology	Ester CARRENO SALAS, Madrid (2021-2026)
LC: Lens and Cataract	Rafael I. BARRAQUER, Barcelona (2023-2028)
MBGE: Molecular Biology / Genetics / Epidemiology	Joni TURUNEN, Helsinki (2024-2029)
NSPH: Neuro-ophthalmology / Strabismology / Paediatric Ophthalmology / History of Ophthalmology	Patrick YU WAI MAN, Cambridge (2020-2025)
PO: Pathology / Oncology	JWM BEENAKKER, Leiden (2020-2025)
PBP: Physiology / Biochemistry / Pharmacology	Pedro DE LA VILLA, Madrid (2021-2026)
RV: Retina / Vitreous	Lyubomyr LYTVYNCHUK, Giessen (2023-2028)
Youth Advisory Committee EVER Con	mmunication and Social Media Sub-Committee

Youth adviser

Pilar Rojas LOZANO, Madrid

EVER Representatives in Acta Boards

EVER-Acta	Miriam KOLKO, Copenhagen
EVER-Acta	Kai KAARNIRANTA, Kuopio

Local Representative

28" EVER 9-11 October 2025 Florence

08:30-08:45 | Room 2

08:45-09:30 | Room 2

Diseases of retinal blood vessels of such as diabetic retinopathy are prominent causes of vision loss worldwide. Drivers of disease include endothelial cell and pericyte degeneration leading to vascular leakage, retinal ischemia and in severe cases pathological preretinal neovascularization. Anti-VEGF therapies have revolutionized treatment, however they require regular intravitreal injections and are inefficient in a large subset of patients. In this lecture, I will discuss 2 experimental disease modifying approaches developed by our lab that are currently being investigated in clinical trials. Firstly, I will discuss how modulation of neuronal guidance cues such as semaphorins can promote functional vascular regeneration and alleviate retinal ischemia. Secondly, I will present how therapeutic elimination of senescent cells from diseased retinas can trigger vascular repair and lead to long lasting benefits in patients and present preclinical and clinical data to support these findings.

- 08:45 Introduction Andrzej Grzybowski (Poland)
- 08:50 Therapeutic vascular remodelling in diabetic retinal disease: on semaphorins and cellular senescence Przemyslaw Sapieha (Canada)

09:20 Discussion

09:30-10:45 | Room 2

LC 87 - Biometry and intraocular lens power calculation

Starting with ultrasound measurement of the eye in the 70ties of the last century, many attempts have been made to improve ocular biometry. Optical biometry was one of the cornerstones in modern cataract surgery, which was a mandatory requirement for all premium lenses. Today, all distances of the eye and the curvature of the corneal front surface could be measured with a high precision, and some of the biometers also offer tomography to assess corneal back surface curvature. First lens power calculation formula was presented in 1967 by Fyodorov, but a systematic pre-cataract biometry with individual lens power calculation started 20 years later with empirical and vergence based formulae such as SRK(2), SRKT, Hoffer-Q, Holladay, and Haigis. Today, most of the modern lens power prediction concepts are undisclosed and available online or integrated in optical biometers. In this course we will give an overview on different biometry modalities and basic lens power calculation concepts and we will discuss the pros and cons critically.

Organizer: Achim Langenbucher (Germany) Co-organizer: Oliver Stachs (Germany)

- 09:30 Ultrasound and optical biometry before cataract surgery **Oliver Stachs** (Germany)
- 09:41 Basics in lens power calculation – from the empirical concept to formula-based calculation and raytracing Achim Langenbucher (Germany)
- 09:52 Formula constants and optimizations Achim Langenbucher (Germany)
- 10:03 Calculation of toric lenses and clinical aspects of toric lens implantation **Timo Eppig** (Germany)
- 10:14 Lens power calculation after corneal refractive surgery Jascha Wendelstein (Switzerland)
- 10:25 Lens power calculation in long and short eyes - which formula is the best? Jascha Wendelstein (Switzerland)
- 10:35 Discussion

09:30-10:45 | Room B

SIS NSPH 42 - Challenges in pediatric ophthalmology

This symposium combines anterior and posterior segment questions with respect to pediatric ophthalmology. Both conservative and surgical aspects will be addressed.

- Organizer: **Thomas Fuchsluger** (Germany) Co-organizer: **Patrick Yu-Wai-Man** (United Kingdom)
- 09:30 Molecular mechanisms and clinical factors influencing progression of aniridia-associated keratopathy Nora Szentmary (Germany)
- 09:43 Keratoplasty in children yes or no, when and how? T**homas Fuchsluger** (Germany)
- 09:56 Surgical treatment of ectopia lentis in children Lyubomyr Lytvynchuk (Germany)
- 10:09 When it is not a simple myopia: what is this disease with an XL eye? **Vasily Smirnov** (France)
- 10:22 Inherited optic neuropathies an update Patrick Yu-Wai-Man (United Kingdom)
- 10:35 Discussion

Central serous chorioretinopathy – up date is planned as a SIS. During the session highly recognized specialist on CSCR patomechanism, diagnostics and treatment will share their experience as well as results of their research regarding this clinical entity. As CSCR is a common disorder, but without strong recommendations for its management, the topic seem important for both clinical practice and clinical research. Among specific subjects associated with CSCR are mineralocorticoid pathway concept, modern diagnostic modalities, such as OCT angiography, validation of results of subthreshold micropulse treatment of CSCR and current opinion on utilization of photodynamic therapy in its treatment. Finally, practical algorithms for `CSCR management will be presented.

Organizer: **Maciej Gawęcki** (Poland) Co-organizer: **Andrzej Grzybowski** (Poland)

- 09:30 CSCR-patomechanism and etiology Francine Behar-Cohen (France)
- 09:43 CSCR multimodal diagnostics, recognition criteria. Classification **Stephen Schwartz** (USA)
- 09:56 CSCR treatment with classic and subthreshold lasers **Maciej Gawęcki** (Poland)
- 10:09 CSCR treatment with PDT. Strategies, eligibility Maurizio Battaglia Parodi (Italy)
- 10:22 CSCR algorithm for diagnostics and treatment **Kai Jin** (China)
- 10:35 Discussion

09:30-10:45 | Room 4.1

EOVS 70 - Basic principles of state-of-the-art ophthalmic instrumentation

This course is aimed at providing an overview of the basic optical principles and machine learning applications of state-of-the-art retinal-imaging systems, with a special emphasis on optical coherence tomography (OCT). The course will include a discussion of additional contrast mechanisms, future trends and cutting-edge developments, along with how such imaging can even serve as a window into brain mechanisms. The goal is to illuminate for the clinician and scientist the underlying optical concepts of various devices and technological variations, even when not familiar with the particular technology employed within the instrument, and to demonstrate its potential with applications beyond those of retinal disease diagnosis and follow-up.

Organizer: Kristina Irsch (France) Co-organizer: Miguel Castelo-Branco (Portugal)

- 09:30 Optical coherence tomography Basic optical principles **Kristina Irsch** (France)
- 09:48 Optical coherence tomography Additional contrast mechanisms, future trends, and cutting-edge technological developments **Kristina Irsch** (France)
- 10:06 Optical coherence tomography Machine learning **Rui Bernardes** (Portugal)
- 10:15 Retinal imaging A window into brain mechanisms **Miguel Castelo-Branco** (Portugal)
- 10:33 Discussion

10:45-11:15 | Coffee break

11:20-12:05 | Room 2

Past President Lecture

The integration of artificial intelligence (AI) into ophthalmology has led to transformative advances in disease detection, prognosis, and population-level screening. While performance gains are evident in controlled settings, real-world deployment reveals persistent challenges. Some are well-recognized, including biases in training data, limited generalizability across populations, and lack of interpretability, representing the "known unknowns." However, a growing concern lies in "unknown unknowns": unpredictable failures that arise when AI systems encounter out-of-distribution inputs, rare pathologies, or subtle shifts in imaging protocols. This lecture explores the implications of these uncertainties for clinical safety, trust, and equity in ophthalmic AI. Addressing them requires not only technical innovation, such as uncertainty quantification and robust validation, but also a reframing of AI as a probabilistic and context-aware partner in clinical decision-making.

- 11:20 Introduction Christina Zeitz (France)
- 11:25 Al in Ophthalmology: between known and unknown unknowns Andrzej Grzybowski (Poland)
- 11:55 Discussion

12:05-13:20 | Room 2

SIS COS 83 - Update on instrument-assisted diagnosis for screening and diagnosis of ectatic corneal disorders

000000000

Since the launch of the first Placido topographers in the early 90ties ophthalmologists are assisted with screening and diagnosis metrics for corneal ectatic diseases. Such instruments were restricted to detect early pathological changes at the corneal front surfaces. A decade later, fist Scheimpflug tomographers showed-up which could detect and interpret early changes in the shape of both corneal surfaces together with the corneal thickness profile. Since 15 years high resolution anterior segment OCTs are on the market which have the potential to pathologies in the entire anterior eye segment. In this SIS we will show the fundamentals and development of instrument-based screening and diagnosis metrics for corneal ectatic diseases such as keratoconus, keratoglobus or pellucide marginal degeneration, and we will address quality terms such as precision, accuracy, specificity and sensitivity. New trends of instrument-assisted diagnosis such as indices from the Corvis biomechnic analysis and modern deep learning algorithms will be critically discussed and evaluated in terms of early diagnosis, staging, and monitoring of ectatic corneal disorders.

Organizer: **Achim Langenbucher** (Germany) Co-organizer: **Michael Belin** (USA)

- 16:50 Corneal ectasia in a clinical setting László Modis (Hungary)
- 17:03 Ectasia screening with the Placido topographer, Scheimpflug tomographer and anterior segment OCTs Achim Langenbucher (Germany)
- 17:16 Instrument based screening vs. clinical diagnosis How do modern tomographers assist the ophthalmologist **Michael Belin** (USA)
- 17:29 New developments of keratoconus diagnosis with the Corvis biomechanical analysis Elias Flockerzi (Germany)
- 17:42 Al and deep learning in early keratoconus Think the unthinkable **Benjamin Fassbind** (Switzerland)
- 17:55 Discussion

12:05-13:20 | Room B

SIS NSPH 84 - Protect, enhance, restore - novel strategies for the optic nerve rescue

The optic nerve, a crucial component of the visual pathway, plays an essential role in transmitting visual information from the retina to the brain. Damage to the optic nerve can lead to irreversible vision loss and significantly impair quality of life. The need for optic nerve restoration has become increasingly critical as advancements in medical technology and neuroscience highlight the potential for regenerative therapies. Current treatment options are limited, often focusing on managing symptoms rather than addressing the underlying damage. Innovative approaches, including stem cell therapy, neuroprotective strategies, and biomaterial scaffolds, are being explored to promote nerve regeneration and functional recovery. Restoration of optic nerve function not only aims to recover lost vision but also has profound implications for enhancing cognitive processing and overall well-being. As the population ages and the prevalence of optic nerve injuries rises, prioritizing research and development in this field is vital for improving patient outcomes and fostering greater independence for those affected by vision loss.

Organizer: Adrian Smedowski (Poland) Co-organizer: Marcela Vortuba (United Kingdom)

- 12:05 Optic nerve rescue 2025 update Adrian Smedowski (Poland)
- 12:21 Pharmacological restoration of the optic nerve **Tasneem Khatib** (United Kingdom)
- 12:37 Electrostimulation of the optic nerve Marcela Vortuba (United Kingdom)
- 12:53 CNTF-based RGC rescue Jeffrey Goldberg (USA)
- 13:09 Discussion

SIS LC 62 - Myopia controversies and challenges in 2025

High myopia is a major cause of visual impairment. In the last 60 years, there has been a marked increase in the prevalence of high myopia in developed countries in East and Southeast Asia, and there are signs of similar, but less dramatic increases, in North America and Europe. It is accepted that myopia results from excessive axial elongation of the eye, which appears to be environmentally driven. The session will present major controversies related with myopia pathogenesis and treatment, including progression of myopia in adults, treatment differences between Asian and non-Asians, and challenges, including Low-level Red Light Therapy, and Myopia Calculators.

Organizer: Andrzej Grzybowski (Poland) Co-organizer: Olavi Pärssinen (Finland)

- 12:05 Historical overview of the studies about epidemiology of myopia **Olavi Pärssinen** (*Finland*)
- 12:18 Incidence and progression of myopia in adulthood **Mohammad Hassan Emamian** (Iran)

- 13:10 Discussion

12:05-13:20 | Room 4.1

SIS EOVS 46 - Electrophysiology and the localisation of visual pathway dysfunction

Symptoms and signs associated with retinal and retinal ganglion cell pathology are often non-specific and pose a diagnostic challenge. Precise phenotyping may be confounded by the limitations of subjective tests, whereas electrodiagnostic recordings provide objective methods which can localise and characterise dysfunction within the retina. This SIS will provide an update on electrophysiological methods relevant to ophthalmic and neuro-ophthalmic practice, including complementary use of full-field electroretinography, used to assess photoreceptor and inner retinal function, pattern electroretinography, used to assess macular and macular retinal ganglion cell function, and electro-oculography, essential to assess generalised retinal pigment epithelium function. The use of recently published International (ISCEV) standard methods and extended ERG protocols will be highlighted, using case-based examples to illustrate how loci of dysfunction may be identified, aiding diagnosis and clinical management. Recent phenotyping data will be used to show the principles of interpretation, discrepancies between structure and function and the clinical value of electrophysiological testing.

Organizer: Anthony G. Robson (United Kingdom) Co-organizer: Omar Mahroo (United Kingdom)

- 12:05 Generalised RPE dysfunction in adults and children **Dorothy Thompson** (United Kingdom)

SIS LC 59 - Restoration of cccommodation

The restoration of accommodation in the pseudophakic eye is still regarded one of the last remaining frontiers in ophthalmology. Decades of principal and applied research resulted in numerous concepts from lens regeneration and lens refilling to electro-optical solutions. Most concepts failed in clinical trials due to a lack of predictability of the refractive outcome or a lack of accommodation in the long term. Additional factors that prevented successful clinical application were lack of usability in terms of requirement for a large incision, bulky implant, and/or generally complicated implantation compared to standard IOLs. Factors preventing commercial success from the manufacturers point of view is a complex production resulting in non-competitive price. We give an overview on the principles and historic and current concepts of accommodative intraocular lenses and lens regeneration and discuss the challenges associated with accommodative IOLs from the regulatory and clinical perspective.

Organizer: **Timo Eppig** (Germany) Co-organizer: **Justin Christopher D'Antin** (Spain)

NSPH 66 - Decoding the scientific headline in ocular neurobiology

In a world where scientific communication is crucial for the dissemination and impact of research, transforming complex findings into accessible messages without compromising accuracy is a challenge. Recognizing this need and building upon the success and excellent feedback of the 'Improve the impact of your eye research with storytelling' session at the last EVER meeting, this proposal outlines the next phase to strengthen our research communication. This hands-on course is designed for researchers in ocular neurobiology who seek to improve their ability to communicate discoveries clearly and effectively. Through interactive exercises, participants will analyze how the media presents science and learn to identify the key elements that ensure information shared with society is both useful and accurate, avoiding misinformation and misconceptions. The course will focus on specific examples from ocular neurobiology, from neural plasticity in the visual system to the effects of light on the retina, emphasizing the importance of precise yet accessible language in scientific outreach. By the end of the course, attendees will have gained tools to better communicate their research, minimizing distortions and fostering a more effective dialogue with the media and the general public.

Organizer: **Victor Meseguer** (Spain) Co-organizer: **Ariadna Diaz-Tahoces** (Spain)

C RV 53 - Management of geographic atrophy between AI-assisted multimodal imaging and function

This course provides a comprehensive approach to managing geographic atrophy (GA) secondary to age-related macular degeneration (AMD) by integrating advanced imaging, artificial intelligence (AI), and functional assessment. Participants will first explore the latest multimodal imaging techniques to enhance detection and monitoring of GA progression. The focus then shifts to the role of AI in quantifying lesion characteristics, tracking changes over time, and predicting disease trajectory. By leveraging AI-driven analysis, clinicians can gain deeper insights into GA evolution and refine monitoring strategies. Finally, the course examines how structural biomarkers correlate with functional vision loss including microperimetry, addressing the impact on patient quality of life and visual performance. Understanding these connections will allow for improved clinical decision-making, patient courseling, and future therapeutic strategies. This program equips clinicians with essential tools to optimize GA management.

Organizer: Gregor Reiter (Austria) Co-organizer: Enrico Borrelli (Italy)

THURSDAY 9 OCTOBER 2025

SIS EOVS 54 - Vision beyond just visual acuity

With the identification of novel targets, the number of interventional clinical trials in ophthalmology has increased. Visual acuity has for a long time been considered the gold standard endpoint for clinical trials, but in the recent years it became evident that other endpoints are required for many indications including geographic atrophy and inherited retinal diseases. Numerous potential surrogate endpoints have been proposed, but their validation remains a complex challenge, requiring robust scientific evidence. In this symposium, we provide an overview of promising clinical endpoints in ophthalmology, with a particular focus on retinal diseases. We explore functional and structural biomarkers, as well as quality of life measures, and critically assess their potential as endpoints in pivotal trials. This highly interdisciplinary symposium brings together leading experts from ophthalmology (Scholl), engineering (Ghezzi), and neuroscience (Herzog). It features clinical findings from large-scale studies in age-related macular degeneration (AMD) and inherited retinal diseases (Scholl), advancements in neuroprostheses (Ghezzi), and extensive visual testing and statistical analysis in both patients and healthy controls (Herzog).

Organizer: **Michael Herzog** (Switzerland) Co-organizer: **Hendrik Scholl** (Austria)

Soubrane EVER Keynote Lecture

The retinal pigment epithelium (RPE) supports photoreceptors through key functions like outer segment phagocytosis and visual pigment replenishment. Regional differences in RPE sensitivity are implicated in diseases such as age-related macular degeneration (AMD) and choroideremia. However, most in vitro and animal models lack proper macular regions, limiting their disease modeling accuracy. This study aims to generate iPSC-derived macular and mid-peripheral RPE to better model regional RPE degeneration. Using AI-based software (REShAPE), we identified five RPE subpopulations, with P1 representing macular RPE and P3 representing mid-peripheral RPE. We screened 115 developmental pathway-targeting compounds to generate macular and mid-peripheral RPE from iPSCs. The RPE subtypes were assessed through morphology, barrier function, RNA sequencing, metabolism, and complement-induced stress assays. Macular iPSC-RPE displayed sheet-like apical processes, supported cones, relied on glycolysis, and showed higher AMD-like sensitivity. Mid-peripheral iPSC-RPE exhibited finger-like apical processes, supported rods, used oxidative phosphorylation, and were more resilient to stress. This model provides a more physiologically relevant platform for studying retinal diseases, drug screening, and targeted cell replacement therapies.

SIS NSPH 50 - Optic neuropathies - from mechanisms to therapies

Optic neuropathies encompass a diverse group of disorders affecting the retinal ganglion cells and the optic nerve, often leading to irreversible vision loss. Recent advances in genetics, molecular biology, and neuroprotection are transforming our understanding of these conditions and paving the way for novel therapeutic approaches. This symposium will bring together leading experts to explore the latest breakthroughs, from disease mechanisms to innovative interventions. The session will begin with an overview of the expanding genetic landscape of inherited optic neuropathies, highlighting newly identified mutations and their implications for diagnosis and treatment. Next, we will examine how retinal ganglion cells serve as early biomarkers of metabolic and mitochondrial dysfunction in LRRK2 Parkinsonian models, offering insights into neurodegenerative disease intersections. We will then present an update on OPA1 rescue by trans-splicing, a promising strategy to restore mitochondrial function in dominant optic atrophy. Finally, we will introduce the mitoVISION-IQ, a novel tool designed to measure quality of life in clinical trials for inherited optic neuropathies, neuropathies, bridging fundamental mechanisms with translational and clinical advances.

Organizer: Neringa Jurkute (United Kingdom) Co-organizer: Raoul Kanav Khanna

S RV 58 - Retinal fibrosis: molecular mechanisms and emerging therapeutic strategies

28th EVER 9-11 October 2025

Retinal fibrosis is a major clinical challenge that contributes to vision loss in several retinal diseases, including diabetic retinopathy, age-related macular degeneration (AMD), retinopathy of prematurity, and proliferative vitreoretinopathy. Current therapeutic approaches remain largely ineffective, likely due to a limited understanding of the molecular and cellular mechanisms underlying fibrosis in the retina. This symposium will foster innovative discussion through bringing together experts in retinal cell biology, fibrosis, and translational research to discuss recent advances in understanding the pathophysiology of retinal fibrosis and explore innovative therapeutic strategies. Symposium Objectives: to discuss the molecular and cellular mechanisms of retinal fibrosis; to discuss emerging therapeutic strategies for preventing or treating fibrosis; to foster collaboration between researchers, and clinicians in the field of retinal diseases.

JM EVER-CORONIS Foundation - Ocular surface innervation disorders

In the past, the role of sensory nerves in ocular surface disorders received little attention in ophthalmology. However, growing awareness of eye discomfort and pain, especially in common ocular surface conditions and following modern anterior segment surgeries, has shifted this view over the last few decades. An important function of corneal nerves is the trophic maintenance of ocular tissues, which is particularly impaired in diabetes. There is now growing evidence highlighting the essential interaction between peripheral sensory nerves and ocular tissues, along with a dynamic relationship between the nervous and immune systems, which can become dysregulated in disease. The 2025 Coronis Ocular Surface Biennial Symposium will begin with a plenary lecture and the presentation of the Endre A. Balazs Medal to Professor Reza Dana, in recognition of his significant contributions to our understanding of the influence of corneal nerves on immune, epithelial, and endothelial function. The program will continue with expert presentations on advances in ocular surface regeneration, the diagnosis and treatment of neuropathic ocular pain, and the role of corneal nerves in dry eye disease and viral keratitis.

Chairman: Jesús Merayo LLoves (Spain)

12:10-12:55 | Room 2

The eye and the brain are considered to display "immune privilege" (IP), a term that was introduced to explain why corneal allografts were accepted but skin allografts were rejected. Similar allografts to the brain and to the anterior chamber of the eye had previously been shown not to be rejected. Over time, the concept was extended to consider the CNS as a privileged site to all foreign antigens but the evidence that the CNS provides a privileged environment for infectious agents has been less strong. The tissue environment plays a role in determining the outcome of the host-microbe interaction. The CNS (the brain parenchyma and the retina) has a tightly regulated immune response, mediated mainly through parenchymal microglia and perivascular macrophages. In contrast, the CNS border tissues (leptomeninges, uveal tract) both house a sizeable complement of resident immune cells which maintain homeostasis and act as "guardians" of immunity in CNS. The AIDS epidemic revealed how defective immunity led to the emergence of opportunistic CNS infections in immunodeficient individuals, suggesting that in immunocompetent individuals these organisms persist as latent infections. A relationship between latent CNS infection and CNS immunity (IP) may exist and possible mechanisms are discussed.

SIS NSPH 89 - Genetic factors and clinical manifestations in developmental eye disorders: the current state and future directions

· 6 · 0

0 0

Over the past 25 years, we have collected a cohort of over 1,000 genetically unexplained families affected with pediatric ocular disorders including early-onset cataract or glaucoma, aniridia/iris hypoplasia, corneal opacities, Axenfeld-Rieger anomaly, complex microphthalmia, and other developmental phenotypes. Through targeted gene sequencing, copy number variation analysis, and exome/genome sequencing in families affected with these disorders, we successfully identified a genetic etiology for ~50% of these families, with varying success rate for specific phenotypes. These studies identified multiple novel genes previously not associated with human disease as well as uncovered novel disease mechanisms or phenotypic extensions for known factors. However, our knowledge regarding the genetic factors involved in developmental ocular phenotypes remains incomplete and we are diligently working to identify new causes, through cutture, and iPSC-derived disease models. This presentation will include discussion of novel approaches and exciting new candidates to explain additional families with a broad range of developmental ocular phenotypes with different clinical manifestations.

SIS RV 77 - Saving the macula: novel aspects of pathology and treatment strategies in retinal diseases

Macular preservation remains a critical challenge in the management of retinal diseases, where novel therapeutic strategies are rapidly evolving. This session, "Saving the Macula: Novel Aspects of Pathology and Treatment Strategies in Retinal Diseases," will explore groundbreaking approaches in gene and cell-based therapies, innovative drug delivery methods, and advancements in genetic testing for retinal disorders. Experts from leading institutions will discuss emerging treatments for age-related macular degeneration, stem cell transplantation, and vision restoration techniques. Attendees will gain insight into cutting-edge research and clinical applications, fostering a deeper understanding of how modern ophthalmology is reshaping the future of retinal disease management.

Organizer: Lyubomyr Lytvynchuk (Germany) Co-organizer: Stephen Schwartz (USA)

- 14:15 The role for genetic testing in AMD care **Stephen Schwartz** (USA)
- 14:28 Cell-based therapy of retinal disorders **Kapil Bharti** (USA)
- 14:41 Developing a new delivery route for stem- and gene-based therapy of retinal diseases **Lyubomyr Lytvynchuk** (Germany)
- 14:54 A model for de novo pigmentation of amelanotic retinal pigment epithelial cells for cell-based therapy **Goran Petrovski** (Norway)
- 15:07 How to help patients who losing their vision: update on vision aid **Marc Levy** (USA)
- 15:20 Discussion

14:15-15:30 | Room 4.1

SIS EOVS 73 - Vision requirements within demanding work environments

The content and topics of interest we put forward this year are new and reflect the continued importance and wide range of vision standards within visually demanding occupations. Visual performance can be affected by many different stimulus attributes. Vision standards set within each occupation must ensure that those applicants who pass can perform all suprathreshold, safety-critical tasks within that environment as well as normal trichromats (who have no visual / ocular disabilities). Safety cannot be compromised, but safety-critical tasks always employ suprathreshold stimuli that are well above the expected upper normal threshold limits. It is therefore also important to ensure that the standards we set do not discriminate against those applicants with mild deficiencies who are able to carry out visually demanding tasks as well as applicants with normal vision. The papers selected for presentation in this symposium focus on four key aspects of occupational vision that remain controversial.

Organizer: John Barbur (United Kingdom) Co-organizer: Marisa Rodriguez-Carmona (United Kingdom)

- 14:15 The effects of long-term work in mesopic environments on different aspects of functional vision **Rafaela Garrido Mercado** (Spain)
- 14:28 Improvements in colour vision assessment for train drivers Marisa Rodriguez-Carmona (United Kingdom)

Missoten EVER Keynote Lecture

As a Neurologist with an interest in visual disorders I have seen many patients affected by Occipital Lobe disorders. These range from visual loss (hemianopia and cortical blindness) through to positive symptoms and hallucinations. My career has spanned an era where advances in clinical assessment on the one hand and in basic science on the other have resulted in a vast mutually beneficial increase in knowledge. In my talk I hope to convince the EVER community of the continuing benefits to science and to patients of this approach.

- 15:35 Introduction Marisa Rodriguez-Carmona (United Kingdom)
- 15:40 40 years with the occipital lobe Gordon Plant (United Kingdom)
- 16:05 Discussion

16:15-16:45 | Coffee break

16:45-18:00 | Room 2

SIS LC 74 - New technologies and innovations in cataract surgery

Cataract surgery is one of the most common and successful surgical procedures performed in the world today. Although cataract surgery is already an extremely safe and effective treatment for visual restoration in patients with cataract, it is constantly evolving and improving with the aim to deliver the best possible clinical outcomes in terms of safety and visual results. In this special interest symposium, we will highlight significant advancements and innovations in cataract surgery, expanding from modern Al-assisted IOL power calculation to digital navigation-assisted implantation of toric IOLs, and from femtosecond laser-assisted cataract surgery to the latest IOL technology. The purpose of this symposium is to provide useful insights into current advancements in cataract surgery not only to novice surgeons, but also to seasoned experts, thereby improving their clinical and surgical practice.

Organizer: **Zisis Gkatzioufas** (Switzerland) Co-organizer: **Andrzej Grzybowski** (Poland)

- 16:45 What AI can add to cataract surgery: update 2025 Andrzej Grzybowski (Poland)
- 16:58 Digital navigation-assisted implantation of toric IOLs **Zisis Gkatzioufas** (Switzerland)
- 17:11 Arc stérile: a new surgical space for cataract surgery Louis Arnould (France)
- 17:24 Evolution of IOL technologies Mayank Nanavaty (United Kingdom)
- 17:37 Accommodating IOLs, evolution and future **Rafael I. Barraquer** (Spain)
- 17:50 Discussion

16:45-18:00 | Room B

SIS COS 27 - Neuroimmune crosstalk in the cornea: new insights into sensory and immune interactions

The concept of corneal "immune privilege" has been extensively studied since its initial conception. The cornea is endowed with a significant population of resident immune cells, whose function in ocular physiology extends beyond pathogen defence. Interactions between these immune cells and other corneal components, such as sensory nerves, appear to play a crucial role not only in inflammatory and pathological conditions but also in maintaining corneal homeostasis. In this symposium, we will discuss the latest advances in corneal neuroimmune interactions research and their potential implications for health and disease, presented by leading experts and promising early-career researchers in the field. To encourage the participation of young investigators, one presentation will be selected from the abstracts submitted by early-career researchers in the field.

Organizer: **M. Carmen Acosta** (San Juan de Alicante) Co-organizer: **Laura Frutos-Rincón** (Spain)

- 16:45 Corneal neuropathy: cause or consequence **Reza Dana** (USA)
- 17:01 Corneal neuroimmune interactions and pain: unraveling the complex connections **Réaux-Le Goazigo Annabelle** (France)
- 17:17 Uncovering functional interactions between dendritic cells and sensory nerves in the healthy cornea **Laura Frutos-Rincón** (Spain)
- 17:33 Provisional title: Neuroinflammation: connecting pain and inflammation **Giulio Ferrari** (*Italy*)
- 17:49 Discussion

16:45-18:00 | Hall 3.2

SIS MBGE 48 - Contribution of genetic and environmental factors to the development and protection of myopia

Myopia, also called nearsightedness, is a condition in which objects in the distance are blurred. Both, genetic and environmental factors may cause this condition. Recent findings have shown that myopia is the most common ocular disorder worldwide with an increasing prevalence in the last 40 years. It is predicted that the worldwide prevalence of myopia will increase from the current 25 to 50% in the next three decades, while the prevalence already exceeds 80% in several parts of Asia. Isolated myopia is rare, which represent a non-syndromic severe myopia, which may be associated with cataract and retinal detachment that may lead to blindness. In addition, high myopia may also occur in other rare disorders, e.g. in retinal disorders like retinitis pigmentosa and congenital stationary night blindness. The aim of this symposium is to summarize the knowledge of myopia in respect to clinical aspects of myopia, the identification of candidate genes and environmental factors by genome-wide association studies and by in vivo modeling.

Organizer: **Christina Zeitz** (France) Co-organizer: **Baptiste Wilmet** (France)

- 16:45 Myopia and OCT Falk Schrödl (Austria)
- 17:00 Importance of phenotyping patients with myopia Isabelle Audo (France)
- 17:15 Focus on Mendelian myopia & treatment Virginie Verhoeven (The Netherlands)

16:45-18:00 | Room 4.1

SIS EOVS 79 - Innovative early-age-related macular degeneration (AMD) phenotyping

The Symposium explores cutting-edge methods for early Age-Related Macular Degeneration (AMD) detection through imaging and computational analysis. The first session introduces the need for Early AMD biomarkers, emphasizing the challenges of applying traditional clinical grading schemes to Optical Coherence Tomography (OCT) images, and closing with clinical implications for early AMD screening and progression monitoring. Lisa Nivison-Smith presents RPE curvature analysis highlighting its correlation with drusen development and its potential for early AMD screening. The next talk by Thomas Peschel focuses on exact drusen masking as ground truth, comparing manual, semi-automated, and fully automated segmentation methods to enhance AMD classification and progression assessment. Marcus Wagner describes feature recognition by descriptomics as innovative early AMD phenotyping. He introduces stereology as a robust method for quantifying drusen volume, providing statistical advantages over binary segmentation. A panel discussion addresses the integration of AI and statistical models, standardization challenges, and clinical translation. The symposium fosters interdisciplinary collaboration to advance AMD phenotyping and precision medicine.

Organizer: Franziska G. Rauscher (Germany) Co-organizer: Marcus Wagner (Germany)

- 16:45 Retinal pigment epithelium (RPE) curvature as an early AMD biomarker Lisa Nivison-Smith (Australia)
- 17:03 Exact masking of drusen by desktop application for manual grading of Early-AMD lesions Precision in AMD segmentation **Thomas Peschel** (Germany)
- 17:21 Recognition of Early-AMD lesions in retinal OCT scans by descriptomic Marcus Wagner (Germany)

SIS COS 75 - New technologies and innovations in corneal surgery

Corneal surgery has evolved rapidly over the last years. The introduction and refinement of lamellar transplantation techniques, as well as advancements in tissue bioengineering and regenerative medicine have revolutionized corneal transplantation surgery. Moreover, translational research has contributed enormously towards the fabrication of artificial corneal transplants. Finally, employment of modern technology, such as the use of femtosecond laser, together with technological innovations including intraoperative optical coherence tomography or 3D head-up surgery, provided increased precision and safety, particularly in complex cases. In this special interest symposium, we provide useful insights into new technologies and innovations in corneal surgery, aiming to improve the clinical and surgical practice of both novice surgeons and seasoned experts in the field.

Organizer: **Zisis Gkatzioufas** (Switzerland) Co-organizer: **Thomas Fuchsluger** (Germany)

- 16:45 Current approaches in corneal endothelial bioengineering Gilles Thuret (France)
- 16:58 Artificial cornea Where are we standing? **Thomas Fuchsluger** (Germany)
- 17:11 Intraoperative OCT applications in corneal surgery **Zisis Gkatzioufas** (Switzerland)
- 17:24 Femtosecond laser applications in corneal transplantation **Mohamed Elalfy** (Egypt)
- 17:37 Novel surgery for acute corneal hydrops Arne Viestemz (Germany)
- 17:50 Discussion

G 32 - Why gonioscopy still remains essential in the time of anterior segment OCT

Besides the examination of optic nerve head and retinal nerve fiber bundles, gonioscopy is the most important examination we have when performing structure analysis. The differentiation between angle closure, angle closure suspect and open angle is essential not only for the correct diagnosis, but as well in order to draw the best therapeutic consequences out of these findings. In addition to grading systems that help us to classify the types of glaucoma, we can find pathological changes like abnormal vessels, inflammatory induced changes, pigmentations, clefts etc. that help us to make the right diagnosis and therapy. Nowadays, AS-OCT is a big help and makes it a lot easier, but there are still essential deficits, that do not allow to replace gonioscopy completely by this new examination. In this course, we will show what we can see in normal and pathological eyes and which findings can be observed in AS-OCT and which cannot. We will also explain how a state of the art gonioscopy examination is performed.

Organizer: Anton Hommer (Austria) Co-organizer: Doreen Schmidl (Austria)

- 09:15 Normal findings **Nikolaus Hommer** (Austria)
- 09:36 Abnormal findings Anton Hommer (Austria)

IM 68 - Controversies in ocular inflammation

This session will explore key debates in the diagnosis and management of ocular inflammatory diseases, examining the evolving role of imaging modalities and treatment strategies. Experts will discuss whether fluorescein angiography remains essential in the era of OCT angiography, the necessity of indocyanine green angiography in diagnosing Birdshot chorioretinopathy, and the choice between systemic and local therapy in ocular lymphoma. Additionally, we will assess whether multimodal imaging can replace traditional clinical examination and if local therapies can serve as alternatives to conventional immunosuppression. Through case-based discussions and interactive debates, this session will challenge current paradigms and provide insights into optimizing patient care in ocular inflammation.

Organizer: Ester Carreño Salas (Spain) Co-organizer: François Willermain (Belgium)

- 09:15 Can multimodal imaging substitute clinical examination? Will Tucker (United Kingdom)
- 09:28 Is dye really needed today? Fluorescein angiography vs OCTA Ester Carreño Salas (Spain)

000000000

Systems biology and big data are rapidly transforming biomedical science. This joint course, organized by MGBE and ABC, introduces advanced technologies used in genomic DNA and single-cell research. The course covers key methodologies, including exome and genome sequencing for monogenic diseases, long-read genome sequencing for rare disease diagnostics, and single-cell RNA sequencing (scRNA-seq) alongside chromatin accessibility analysis (ATAC-seq). Participants will gain insights into the applications and interpretation of these technologies in biomedical research.

Organizer: Joni Turunen (Finland) Co-organizer: Heli Skottman (Finland)

- 14:10 Exome and genome sequencing in monogenic diseases Mathieu Quinodoz (Switzerland)
- 14:31 Rare disease diagnostics with long-read genome sequencing Stephan Ossowski (Germany)
- 14:52 Single-cell RNA sequencing (scRNA-seq) and assay for transposase-accessible chromatin using sequencing (ATAC-seq) analyses Jo Zhou (The Netherlands)
- 15:13 Discussion

14:10-15:25 | Room B

SIS COS 60 - Tear fluid biomarkers of the ocular surface: diagnostics, immunology and methodology

Tear fluid is emerging as a source of non-invasive biomarkers since tear fluid biomarkers are the only way to gather biological information about the ocular surface in real time. During this Special Interest Group session, presentations will explore the diagnostic value of these biomarkers in limbal stem cell deficiency and dry eye disease, as well as their significance in ocular immunology. A critical overview of current research methodologies will address common practices and challenges in the field. Furthermore, the session will introduce recent insights into tear fluid miRNAs, discussing their potential applications in non-invasive diagnostics. Overall, the programme aims to stimulate thoughtful discussion on the interdisciplinary links between ocular surface biology and immunology, with an emphasis on clinical relevance and future research directions.

Organizer: Marlies Gijs (The Netherlands) Co-organizer: Piera Versura (Italy) Co-organizer: Amalia Enriquez de Salamanca (Spain)

- 14:10 Optimization of tear fluid collection methods for multi-omics analysis **Clemence Bonnet** (USA)
- 14:23 Tear fluid biomarkers in ocular immunology Antonio Di Zazzo (Italy), Alessandra Micera (Italy)
- 14:36 Advances in tear fluid biomarkers for dry eye disease **Christophe Baudouin** (France)
- 14:49 Methodology of tear fluid biomarker research: common practices and challenges Marlies Gijs (The Netherlands)
- 15:02 Tear fluid biomarkers for ocular pain Amalia Enriquez de Salamanca (Spain)

14:10-15:25 | Hall 3.1

P Free Paper Session 4

- 598 Spironolactone as a candidate for ocular surface regeneration: evidence from a limbal stem cell model **Raquel Gregorio Arribada**, **Rodrigues-Braz Daniela**, **francine Behar-Cohen** (*France*)
- 647 Contralateral-eye analysis of deep anterior lamellar keratoplasty versus mushroom penetrating keratoplasty over 5 years <u>Andrea Taloni</u>, Raphael Kilian, Valentino De Ruvo, Georgiana Camburu, Luigi De Rosa, Niccolò Salgari, Andrea Sollazzo, Angeli Christy Yu, Massimo Busin (Italy)
- 652 Distribution of chondroitin sulphate glycosaminoglycan in rat corneal stroma treated with Ultravoilet-A and Riboflavin: Ultrastructural studies Saeed Akhtar¹, Turki Almubrad¹, Aljohara Alkanaan¹, Adrian Smedowski² (¹Saudi Arabia, ²Poland)
- 610 Evaluating burden of dry eye disease using utility scores: a mapping approach with "Ocular Surface Disease Index" and "European Quality of Life Five Dimensions" Sihem Lazreg¹, Julia Gonzalez² (¹Algeria, ²France)
- 259 Selective serotonin reuptake inhibitor (SSRI) for amblyopia treatment: a systematic review and meta-analysis of randomized controlled trials

Ehtesham Shamsher¹, Luisa de Barros Saccaro², Victor Barreiros Pungirum³, Bao Nghi Tran⁴, Omar Alghaith¹, Fatemeh Khabazianzadeh⁵, I. Betina Ip¹, Holly Bridge¹ (¹United Kingdom, ²Brazil, ³Argentina, ⁴Hungary, ⁵Iran)

180 Identification and validation of a novel anti-angiogenic factor

14:10-15:25 | Hall 3.1

PO 65 - Identifying histopathological lesions in AMD: BLamD, BLinD, and soft drusen for research and clinical practice

This course provides an in-depth examination of histopathological lesions associated with age-related macular degeneration (AMD), including basal laminar deposit (BLamD), basal linear deposit (BLinD), and soft drusen. Participants will learn to identify these lesions in tissue samples through case-based learning and practical insights applicable to research, post-mortem examinations, and pathology practice. The session combines didactic presentations, panel discussions, and audience interaction to ensure comprehensive learning. At the conclusion of this course, the attendee will be able to: 1. identify and differentiate BLamD, BLinD, and soft drusen in histological samples; 2. understand the significance of these lesions in AMD progression and research contexts; 3. Apply histological diagnostic techniques to improve post-mortem examination and pathology reporting; 4. recognise challenges and limitations in identifying AMD-associated lesions and discuss solutions; 5. Utilise structured reporting templates for these lesions in clinical and research practice.

Organizer: Svetlana Cherepanoff (Australia)

- 14:10 Didactic Presentation 1: Recognising AMD-specific lesions in resin and paraffin sections **Svetlana Cherepanoff** (Australia)
- 14:30 Didactic Presentation 2: AMD mimics on ex vivo imaging: histological keys to accurate diagnosis **Svetlana Cherepanoff** (Australia)
- 14:50 Panel Discussion

G 81 - Back to big surgery

Glaucoma, a leading cause of irreversible blindness worldwide, necessitates effective management strategies to preserve vision and quality of life. Despite advances in pharmacological treatments, some patients experience inadequate intraocular pressure (IOP) control or suffer from medication side effects. Surgery offers significant advantages over medical management for glaucoma patients, particularly in those with advanced or refractory disease. Filtration surgery presents notable advantages over minimally invasive glaucoma surgery (MIGS) for treating glaucoma, especially in cases of advanced or poorly controlled disease. One of the key benefits of filtration surgery is its effectiveness in achieving substantial and sustained reduction in intraocular pressure (IOP), often surpassing the levels attainable through MIGS. Furthermore, filtration surgery typically provides a longer-lasting solution, with the potential for fewer reoperations compared to MIGS, which may require additional procedures over time to maintain IOP control. Additionally, filtration surgery has a well-established track record and comprehensive understanding of postoperative management, whereas MIGS, being newer, may have varying outcomes that are still being studied. By offering robust IOP control and durability in treatment outcomes, filtration surgery remains a cornerstone in the management of glaucoma.

SIS IM 72 - How nutrition and dysbiosis are implicated in uveitis; therapeutic opportunities

This symposium will outline the cellular, hormonal, immune, and neural signalling mechanisms that link the gut microbiome, immune system, and eye health focussing on uveitis. We will explore some of the research related to microbiota imbalance and the association with inflammatory conditions that can affect the eye, and the use of probiotics and prebiotics as potential treatment for managing ocular inflammatory conditions. We will also discuss how nutrition and lifestyle impact systemic and ocular health by exploring the effects of Western diet, sedentary lifestyle, stress and disrupted sleep on gut microbiota and metabolic health, and how these factors result in insulin resistance, mitochondrial dysfunction, and systemic and ocular inflammation. We will conclude with an overview of the socioeconomic determinants of health, and associated discrepancies in visual impairment and eye care services, and discuss how food insecurity and nutritional inequalities can lead to ocular diseases.

Organizer: Jarmila Heissigerova (Czech Republic) Co-organizer: Gabriela Ortiz Nieva (United Kingdom)

- 14:10 General introduction Teresa Sandinha (United Kingdom)
- 14:26 Broad description of the association of microbiota imbalance in systemic and ocular pathologies **Gabriela Ortiz Nieva** (United Kingdom)
- 14:42 The gut immunology, microbiome and intestinal barrier disruption impact in the posterior segment inflammation: experimental evidence and potential clinical applications. Jarmila Heissigerova (Czech Republic)
- 14:58 Nutrition and life style influences on the cellular and gut health **Russel Philips** (Australia)
- 15:14 Discussion

15:25-15:55 | Coffee break

16:00-16:45 | Room 2

PS European Academy of Ophthalmology Lecture

Two approaches of controlling the refractive state of tunable lenses are presented:

1. Bipolar contact lens ring electrodes positioned on the scleral conjunctiva right above the ciliary muscle allowed volunteers to use accommodative biopotentials at the surface of the eye to control the refractive state of electrically tunable external lenses. Presbyopes (>75 y) were able to use such biopotentials of their neuronal accommodation reflex to properly focus via electrically tunable lenses a series of computer-controlled optotypes randomly presented for far and near vision up to a 3 dpt accommodative demand.

2. Bipolar intraocular ring electrodes were implanted in Cynomolgous monkeys into the sulcus behind the iris in front of the anterior capsule, contacting the ciliary muscle. Its biopotentials were continuously recorded and wirelessly transmitted via a microcontroller, biopotential amplifier and a Bluetooth interface, positioned on an encapsulated flexible H-shaped printed circuit board (12x18 mm) placed under the superior rectus muscle, powered by a retrobulbar button-cell battery.

Summary: These experiments demonstrate that ciliary muscle biopotentials can be used to restore accommodation via electrically tunable lenses using the natural accommodation-reflex loop of the central nervous system that is defective in presbyopia. Although it will be still a long way to go until the first implantation in man, we have shown in volunteers and cynomolgus monkeys the principal feasibility of such a system to restore accommodation.

16:45-18:00 | Room B

COS 33 - Advanced microscopy techniques in the diagnosis of ocular surface diseases

Diagnosing ocular surface diseases is challenging due to their complexity and variability. Traditional methods, such as slit-lamp biomicroscopy and fluorescein staining, provide limited insights into cellular and subcellular changes in conditions like dry eye, allergic conjunctivitis, and infectious keratitis. These disorders often share overlapping symptoms, complicating accurate diagnosis. Subtle changes, such as glaucoma therapy-induced conjunctival damage, are also difficult to detect with conventional tools. Advanced techniques like in vivo confocal microscopy (IVCM) and scanning electron microscopy (SEM) provide high-resolution imaging of the ocular surface, enabling early detection of cellular abnormalities and pathogens. SEM is especially valuable in assessing infectious keratoconjunctivitis with negative culture results and cases unresponsive to broad-spectrum antibiotics. It also identifies changes in epithelial microvilli, an early biomarker of ocular surface health. However, challenges related to accessibility, expertise, and integration into clinical care limit their use. This course will explore the various microscopy techniques and the use of artificial intelligence in enhancing diagnostic and treatment outcomes.

SIS LC 71 - Learning ophthalmic surgery in virtual reality

Virtual reality training is mandatory in the flight industry and is increasingly becoming mandatory for surgical training in medicine. The SIS will cover principles of motor skill learning, skill monitoring, expected evolution of skill during motor skill learning, and challenges in cataract surgery. Then, the technology behind ophthalmic virtual reality surgery will be presented. Subsequently, the development and experience of introducing virtual reality training as a mandatory step before ophthalmic surgery in patients, will be covered. Thereafter, strategies for and experience of measuring evidence for improvement of surgical skill with virtual reality training of cataract surgery will be presented. Finally, evidence for improvement of ophthalmic surgical skill will be presented. A simulator for virtual reality cataract surgery will be made available at the meeting for trial sessions.

Organizer: **Per Soderberg** (Sweden) Co-organizer: **Ann Sofia Skou Thomsen** (Denmark)

- 16:45 Principles of motor skill learning and challenges in learning cataract surgery **Per Soderberg** (Sweden)
- 16:58 The technology behind ophthalmic virtual reality surgery **Eva Skarman** (Sweden)
- 17:11 Introducing virtual reality training as a mandatory step before surgery in patients **Ann Sofia Skou Thomsen** (Denmark)
- 17:24 Measuring evidence for improvement of skill with virtual reality training **Zhaohua Yu** (Sweden)

16:45-18:00 | Hall 3.2

PO 69 - Scaling of Fundoscopy Images: optical origins, correction methods and impact on clinical studies

Fundus photography is widely used in ophthalmology for diagnosing and monitoring retinal diseases. However, due to individual variations in ocular anatomy and optics, refraction introduces scaling differences that prevent accurate distance measurements on individual fundus images. In this course, we will introduce the optical principles underlying these scaling variations and discuss various methods to correct them, incorporating impacts from ocular anatomy as well as camera design. Furthermore, we will present straightforward phantoms that can be used to calibrate your own camera. The course will then demonstrate the clinical and scientific relevance of these corrections in different contexts of research and clinical routine, for example, by improving the quantification of patchy chorioretinal atrophy in highly myopic patients. Importantly, we will also explain methods for correction in longitudinal studies or when following patients over time, this includes facilitating the impact of emmetropization. Finally, we will examine recent advancements aimed at extending these correction methods to the entire retina, with a particular focus on their applications in radiotherapy planning for ocular tumors, where precise localization is critical for treatment success.

Organizer: **Jan-Willem Beenakker** (The Netherlands) Co-organizer: **Rebekka Heitmar** (United Kingdom)

- 16:45 Understanding and correcting for scaling of fundus photographs **Jan-Willem Beenakker** (The Netherlands)
- 17:01 Impact of emmetropization and refractive errors on fundus images **Rebekka Heitmar** (United Kingdom)
- 17:17 Correcting for changes in refractive error in longitudinal studies Kirsty Tatiana Rodríguez-Ramírez (Germany)
- 17:33 Peripheral images scaling of fundus photographs and their implications in ocular oncology **Corné Haasjes** (The Netherlands)

587	F054	Comparative evaluation of corneal and epithelial thickness measurements using spectral-domain and swept-source anterior segment optical coherence tomography in eyes with keratoconus <u>Mirza Karamovic</u> , Marika Wahlberg Ramsay, Branka Samolov, Abinaya Venkataraman 1 Alberto Dominguez-Vicent (Sweden)
600	F055	Monotherapy with polihexanide 0.08% for the treatment of acanthamoeba keratitis in complex cases Jacqueline Fröhlich, Eleftherios Chatzimichail, Daniela Starosta, Konstantin Gugleta, Nicolas Feltgen, Zisis Gkatzioufas (Switzerland)
607 1	F056	Clinical proteomics characterized age- and tear secretion-associated molecular changes in dry eye syndrome Natarajan Perumal, Hao Lin, Anna Lindner, Adina Glasmacher, Bettina Multani, Caroline Manicam (Germany)
613 ர	F058	Extracellular vesicles and exosomes in corneal graft integration <u>Grace Lin</u> , Neethi Thathapudi, Mostafa Zamani-Roudbaraki, Marie-Claude Robert, May Griffith (Canada)

623 rf	F059	Examination of the potential influence of baseline corneal fluorescein staining score on dry eye symptom improvement in patients treated with ciclosporin 0.1% cationic emulsion: analysis of data from the PERSPECTIVE study
		Anita Reynolds ¹ , Elisabeth M. Messmer ² , Ines Lanzl ² (¹ United Kingdom, ² Germany)
636	F060	Results of advanced surface ablation surgery for patients with myopia above 9 diopters who have been under observation for more than 2 years Liudmyla Ivzhenko, Armen Prokipets (Ukraine)
663 <i>rf</i>	F061	Comparison between Keratograph 5M® and Antares® for ocular surface evaluation <u>Dayan Flores Cervantes</u> , Inas Baoud Ould Haddi, Emilio Dorronzoro Ramírez, Vanesa Blázquez Sánchez, Cristina Bonnin Arias (Spain)
665	F062	Corneal crosslinking surgery following intrastromal corneal ring segment removal in progressive keratoconus: functional, tomographic and biomechanical improvement after one year of follow up <u>Júlio Brissos</u> ¹ , Guilherme Almeida ¹ , Gonçalo Tardão ² , Renato Ambrósio Jr. ¹ (¹ Portugal, ² Brazil)
690 <mark>rf</mark>	F063	The role of dECM hydrogel-nap against high glucose-induced inflammation on 3D-corneal epithelium Grazia Maugeri, Nicoletta Palmeri, Agata Grazia D'Amico, Antonio Longo, Davide Scollo, Simona Casarella, Francesca Boccafoschi, Velia D'Agata (Italy)
706	F064	A 10-Year (2015-2025) retrospective review of fungal keratitis at a UK Tertiary referral centre: it remains a regular threat
		Mohammed Talha Bashir, Parwez Nazir Hossain (United Kingdom)
712	F065	The SUNLIGHT trial: a double-blind Phase 1 safety and tolerability clinical trial of OC134 eye drops Asya Petkova, Andreas G. Schatzlein, Ijeoma F. Uchegbu (United Kingdom)

000000-00-00

POS Poster Session G

120	F066	Long-term evaluation of ocular surface disease signs in patients with open-angle glaucoma or ocular hypertension using the preservative-free 0.005% latanoprost eye drop emulsion: open-label extension data following a 3-month randomized study <u>Kai Kaarniranta</u> ¹ , Francesco Oddone ² , Christophe Baudouin ³ (¹ Finland, ² Italy, ³ France)
133	F067	Retinal and choroidal structural changes in pseudoexfoliation syndrome: a potential early indicator of glaucoma and neurodegeneration <u>Pedro Mota-Moreira</u> , Ana Faria Pereira, Inês Costa-Coelho, Rita Martins, Sérgio Estrela, Cláudia Ferreira (Portugal)
158	F068	Investigating the relationship between intraocular pressure and body mass index in project FOREVER Christina Eckmann-Hansen, Jens Rovelt Andreasen, Josefine Freiberg, Arevak Saruhanian, Miriam Kolko (Denmark)
164 <i>rf</i>	F069	Galectin-3 is associated with Müller cells in glaucoma Anne Rombaut, Alan Nicol, Rune Brautaset, Pete Williams, James Tribble (Sweden)
182 <i>rf</i>	F070	Evaluation of synthetically generated optical coherence tomography images Damon Wong ¹ , Ashish Jith ¹ , Jacqueline Chua ¹ , Leopold Schmetterer ^{1,2} (¹ Singapore, ² Austria)

-0 0 000 000 0000 • • . 0 . • 0000000 00 0 0.0.0 . • -• 0.00 • 0 • . • . . 0 0000 0.0.0 10 10 10 10 10 10 0

207 rf	F071	Proteomics analyses of ocular small extracellular vesicles in glaucoma Ana Guzman Aranguez, Raquel Rejas-Gonzalez, Ana Montero-Calle, Rodrigo Barderas, Natalia Pastora Salvador, María José Crespo Carballes, Juan Snachez-Naves (Spain)
231	F072	Preservatives in glaucoma treatment: a comparative study of preserved and preservative-free latanoprost eye drops on conjunctival goblet cells <u>Nisa Lise Secim</u> , Sille Ehlers Bonne, Umalbaninn Alnoor, Miriam Kolko (Denmark)
238 rf	F073	Impact of preserved and preservative-free latanoprost eye drops on calcium regulation in conjunctival goblet cells <u>Umalbaninn Alnoor</u> ¹ , Jeffrey A. Bair ² , Steffen Heegaard ¹ , Miriam Kolko ¹ (¹ Denmark, ² USA)
260	F074	The Influence of age-related changes of lamina cribrosa of sclera on neurofilaments susceptibility in optic neuropathy Yuliya Huseva (Belarus)
270 rf	F075	Tolerability of preservative-free latanoprost/timolol fixed combination versus preserved bimatoprost/timolol in patients with open-angle glaucoma or ocular hypertension - The AdEQUATE study Julian Garcia Feijoo ¹ , Leopold Schmetterer ^{2,3} (¹ Spain, ² Singapore, ³ Austria)
325 ர	F076	A clinical evaluation of a virtual reality headset-based visual field test compared to standard automated perimetry in healthy volunteers and glaucoma patients Maribel Espinosa-Cabrera (United Kingdom)
327	F077	A qualitative assessment of open-angle glaucoma treatment from the perspectives of ophthalmologists Cindy M.L. Hutnik¹, <u>Pedro Corsino Fernandez Vila</u>², Tarek Hassan³, Shivani Ohri Vignesh⁴ (¹ Canada, ² Spain, ³ USA, ⁴ India)
334	F078	Relationship between macrophage inflammatory protein-1 and basic fibroblast growth factor concentrations in the anterior lens capsule and intraocular pressure in patients with primary open-angle glaucoma, pseudoexfoliation glaucoma and without glaucoma undergoing cataract surgery <u>Katarzyna Gontarz</u> , Mariola Dorecka, Wojciech Garczorz, Tomasz Francuz (Poland)
339	F079	Hidden clues in micro eye movements - Tracking glaucoma progression with retinal eye-tracker NeuroFET <u>Aleksandra Gorczyca-Liczbik</u> , Marta Skrok, Robert Konklewski, Martyna Gebska-Toloczko, Karolina Suwała, Maciej Nowakowski, Valentyna Pryhodiuk, Krzysztof Tołpa, Bogna Bylicka, Anna Szkulmowska, Katarzyna Zabel, Przemysław Zabel, Maciej Szkulmowski, Jakub Kaluzny (Poland)
351 rf	F080	How short is too short? Evaluating postoperative survival after glaucoma surgery in a real-world cohort <u>Bernardo Monteiro</u> , Rafael Whitfield, Vasco Lobo, Emanuel Fernandes, Dina Costa, Nuno Amaro, Miguel Santos, André Diogo Barata, Rafael Correia Barão, Luis Abegão Pinto (Portugal)
377	F081	Our 3-year experience with the PAUL glaucoma implant Evangelia Dalieraki, Georgios Dalianis, Alexandra Trivli, Chryssa Terzidou (Greece)
431 rf	F082	Exploring the associations of self-reported glaucoma and physical activity: findings from a danish eye and vision cohort - Project FOREVER Thao Tran, Jens Rovelt Andreasen, Josefine Freiberg, Christina Eckmann-Hansen, Miriam Kolko (Denmark)
450 ர	F083	Sigma-1 receptor activation represents a novel therapeutic strategy for ocular hypertension Judit Hodrea ¹ , Timea Medveczki ¹ , Tamas Lakat ¹ , Minh Tran ¹ , Akos Toth ¹ , Anna Takacsi-Nagy ¹ , Gyorgy Torok ¹ , Szabo Attila ¹ , Illes Kovacs ^{1,1} , Dr. Fekete Andrea ^{1,2} (¹ Hungary, ² USA)
451	F084	Targeting taurine metabolism for neuroprotection in a rat model of ocular hypertensive glaucoma <u>Eleonora Daghini</u> ^{1,2} , Alan Nicol ¹ , Baninia Habchi ¹ , Evangelia Daskalakis ¹ , Craig Wheelock ¹ , Rosario Amato ² , Maurizio Cammalleri ² , Massimo Dal Monte ² , James Tribble ¹ , Pete Williams ¹ (¹ Sweden, ² Pisa)

FRIDAY 10 OCTOBER 2025

452	F085	Sigma-1 receptor agonist fluvoxamine is protective against hyperglycemia-induced fibrosis in human trabecular meshwork cells Alexandra Rozsahegyi ¹ , Judit Hodrea ¹ , Marcell Cserhalmi ¹ , Timea Medveczki ¹ , Balazs
		Besztercei ¹ , Illes Kovacs ^{1,2} , Szabo Attila ¹ , Fekete Andrea ¹ (¹ Hungary, ² USA)
455 rf	F086	Challenges in glaucoma diagnosis: agreement in clinical diagnosis and deep learning glaucoma screening Joana Pargana ¹ , Afonso Lima-Cabrita ¹ , Rafael Whitfield ¹ , Vasco Lobo ¹ , Bernardo Monteiro ¹ , Sanna Leinonen ² , Ana Miguel ³ , Marta Pazos ⁴ , Panayiota Founti ⁵ , Rafael Correia Barão ¹ , Ingeborg Stalmans ⁶ , Luis Abegão Pinto ¹ ('Portugal, ² Finland, ³ France, ⁴ Spain, ⁵ United Kingdom, ⁶ Belgium)
457	F087	Effect of different treatments on retrobulbar and choroidal blood flow parameters in normal tension glaucoma: a OCT-A and Color Doppler Imaging study <u>Enrico Lupardi</u> , Alice Galzignato, Catarina Coutinho, Monica Ferri, Gian Luca Laffi, Andrea Distefano, Marco Battista, Alfredo Sadun, Piero Barboni, Luigi Brotto, Emma Zuliani (Italy)
462 rf	F088	Inhibitory effects of 3',4'-dihydroxyflavonol in a rabbit model of minimally-invasive glaucoma surgery with PreserFlo Microshunt Jennifer Fan Gaskin, Zoe Pasvanis, Roy Kong, Elsa Chan (Australia)
505	F089	Female life cycle stages and intraocular pressure variations: an analysis of a representative Korean population Haryung Park, Yun Jeong Lee, Jin Wook Jeoung, Ki Ho Park, Young Kook Kim (South Korea)
534	F090	Glaucoma implant as salvage therapy in refractory glaucoma following gold shunt failure and recurrent corneal graft Ariadna Garreta-Rafecas, Elena Milla (Spain)
542	F091	Neovascular glaucoma: a single unit retrospective consecutive series from 2003 to present day to evaluate clinical profile, management and outcomes in the anti-VEGF era <u>Tushar Hari</u> , Alex Tanner, Kieran Teeluck, Jayne Lee, Muneeb Ahmad Khan, Nish Srikantha, Alastair Lockwood (United Kingdom)
545	F092	Minimally invasive surgery in late presentation hypotony after trabeculectomy for complete resolution of bilateral choroidal effusions: a case report <u>Tushar Hari</u> , Jayne Lee, Alex Tanner, Kieran Teeluck, Muneeb Ahmad Khan, Nish Srikantha, Alastair Lockwood (United Kingdom)
554	F093	Dynamic optic disc coloboma as a mask of glaucoma - case series study <u>Bartłomiej Kocurek</u> , Michał Głodzik, Adrian Smedowski (Poland)
555	F094	Selective laser trabeculoplasty (SLT) in practice: the promise of a drop-free future in the management of glaucoma and ocular hypertension? <u>Kieran Teeluck</u> , Nish Srikantha, Tushar Hari, Alex Tanner, Jayne Lee, Muneeb Ahmad Khan, Alastair Lockwood (United Kingdom)
564	F095	Short-term high-dose nicotinamide treatment across glaucoma subtypes reveals increased mitochondrial DNA content and minimal metabolomic changes in blood <u>Simon Gustavsson</u> ¹ , Antoni Vallbona Garcia ² , James Tribble ¹ , Pete Williams ¹ , Gauti Johannesson ¹ , Theo Gorgels ² , Birke Benedikter ² , Hubert Smeets ² , Patrick Lindsey ² , Carroll Webers ² (¹ Sweden, ² The Neterlands)
565	F096	Non-prostaglandin analogue as glaucoma therapeutic: pre-clinical safety & efficacy study <u>Madhu Nath</u> , Nabanita Halder, Kamare Alam, Tanuj Dada, Thirumurthy Velpandian (India)
568	F097	A highly accessible, low-cost, dynamic training model for trabeculectomy surgery Alexander Tanner, Francesco Della Lena, Tushar Hari, Kieran Teeluck, Jayne Lee, Nish Srikantha, Alastair Lockwood (United Kingdom)

FRIDAY 10 OCTOBER 2025

0 ٢ 0 ۲ 0 0 8 3 e ٠ 0 Θ 0 6 0 0 ----ļ Ŧ -• • . 1 -. 0 ۲

582	F098	Retinal nerve fibre layer and ganglion cell complex thickness in patients with metabolic syndrome <u>Ieva Simkiene</u> ¹ , Jacqueline Chua ² , Gabriele Tarutyte ¹ , Jolita Badariene ¹ , Rimvydas Asoklis ¹ , Leopold Schmetterer ² (Lithuania, ² Singapore)
625	F099	A new technique to make glaucoma surgery possible in those patients whose posture would normally preclude this Alastair Lockwood, Muneeb Ahmad Khan, Kieran Teeluck, Tushar Hari, Alex Tanner, Jayne Lee, Nish Srikantha (United Kingdom)
633	F100	Regional disparities in glaucoma diagnosis and surgery in Denmark: urgent need for increased resources Jeppe Samuelsen, Christina Eckmann-Hansen, Kim Holmgaard, Hadi Kjærbo, Miriam Kolko (Denmark)
642 rf	F101	Ensuring reliable glaucoma detection with deep learning: the critical role of calibration and evaluation practices Marcel Reimann, Peter Tejlgaard Kampen, Josefine Vilsbøll Sundgaard, Miriam Kolko Anders Bjorholm Dahl (Denmark)
648	F102	Outcome for primary PAUL glaucoma implantation using tube ligature technique without intraluminal stent: a prospective observational single surgeon study <u>Mohamed Geneid</u> , Jyri-Pekka Koskinen, Mika Harju, Juha Valimaki (Finland)
658	F103	Selective laser trabeculoplasty as an effective method of reducing intraocular pressure in a patient with primary angle-closure glaucoma after laser peripheral iridotomy in a 3-month follow-up period – a case report Mariola Dorecka, Katarzyna Gontarz, Adrian Smedowski, Dorota Wyględowska-Promieńska (Poland)
659	F104	Mid-term outcomes of combined cataract surgery and iStent Inject W <u>Emanuel Fernandes</u> , Afonso Lima-Cabrita, Bruno Guerreiro Dias, Susana Duarte, André Diogo Barata, Luis Abegão Pinto, Rafael Correia Barão (Portugal)
692	F105	Initial efficacy results of Latanoprost 0.005% + Netarsudil 0.02% combination drops, from a single centre Bhavani Selvarasu, <u>Eleanor Carr</u>, Kleonikos Tsakiris (United Kingdom)
700	F106	"It's not always glaucoma": a misdiagnosed case of a carotid-cavernous fistula <u>Pedro Lopes</u> , Joana Ferreira, Ricardo Costa-Gertrudes, Tiago Das Neves, Catarina Rodrigues (Portugal)
<i>7</i> 11	F107	The role of mitochondrial quality control and neuroinflammation in pathogensis of Glaucoma. Anjali Kalwar, Aleksandra Trifunovic (Germany)
Pos	Poster	- Session LC

77 rf	F108	Refractive errors after cataract surgery <u>Rym Maamouri</u> , Molka Ferchichi, Riahi Souhir, Aouni Jaafer, Monia Cheour (Tunisia)
79 rf	F109	Comparison of corneal power assessment methods for true corneal power after myopic small-incision lenticule extraction <u>Xiaoling Fang</u> , Jiannan Huang, Leilei Wang, Wenwen Xue, Xia Chen (China)
93 1	F110	Accuracy of twenty intraocular lens power calculation formulas in long eyes Wiktor Stopyra ¹ , Oleksiy Voytsekhivskyy ² , Andrzej Grzybowski ¹ (¹ Poland, ² Ukraine)
102	F111	Comparison between two extended depth of focus intraocular lenses Kyungmin Koh (South Korea)

0

.

105 <i>rf</i>	F112	Ophthalmological manifestations and visual outcomes of electical and lightning trauma: a systematic review <u>Maria Piedrahita</u> , Felipe Pineda, Felipe Moreno, Maria Estevez, Nicolas España, Viviana Infante, Germán Mejía-Salgado, Carlos Cifuentes, Diana Rey, Laura Rodriguez-Camelo, Alejandra de-la-Torre (Colombia)
249	F113	Comparison of surgically induced astigmatism after cataract surgery in post-LASIK eyes and virgin eyes with long axial length <u>Xia Chen</u> , Xiaoling Fang, Wenwen Xue, Jiannan Huang, Jingjing Wang, Xiangui He, Leilei Wang (China)
256 rf	F114	Influence of axial length on target refraction after intraocular lens implantation in children under 2 years of age Alejandro Alcaide Costa, Eva Calpe, Gemma Julio, Rafael Barraquer (Spain)
301 rf	F115	Systemic medications associate with cataract surgery in patients over 50 years <u>Sirpa Loukovaara</u> , Antti Riikonen, Tuomas Lilius, Jari Haukka (Finland)
348	F116	Quantitative cataract grading based on blue-light autofluorescence confocal imaging Alessandro Arrigo, Emanuela Aragona, Francesco Bandello (Italy)
494 rf	F117	Historical overwiev of the studies about epidemiolgy of myopia Olavi Pärssinen (Finland)
503	F 118	Exploring the use of pre- and retro-pupillary artisan IOLs for managing complex crystalline lens dislocation: a long- term study of visual and endothelial outcomes <u>Windsor Chao</u> ¹ , Howard Wen-Haur Chao ¹ , Penbai Haui ² , Hsiao-Ming Chao ² (¹ United Kingdom, ² Taiwan)
516 rf	F119	Impact of cataract surgery on scotopic and photopic mydriasis <u>Inês Mendo</u> , Mariana Vaz, João Vaz, Filipe Moraes, Inês Machado, Tomas Loureiro, Nuno Campos (Portugal)
551 ர	F120	Effect of the corneal spherical aberrations on the selection of extended range intraocular lenses Dayan Flores Cervantes, Inas Baoud Ould Haddi, Emilio Dorronzoro Ramírez, Vanesa Gerena Arevalo, Cristina Bonnin Arias, Vanesa Blázquez Sánchez (Spain)
558 rf	F 121	An algorithmic approach to refractive aim following cataract surgery in the National Health Service setting George Liu, Christopher Liu (United Kingdom)
638	F122	Chlorpromazine: a psychiatrist's ally, an ophthalmologist's adversary Alaa Ghorbel, Sellem Ilhem, Ben abderrahmen Syrine, Ghorbel Mohamed (Tunisia)
709	F123	Determining the presence of TRPV4 channels and their influence on calcium signaling in human lens epithelium <u>Sofija Andjelic</u> , Dasa Sarman, Bernarda Kinkela, Taja Vita Petrovic, Katarina Mestrovic, Marko Gosak, Marko Hawlina (Slovenia)

FRIDAY 10 OCTOBER 2025

Poster Session 3

•

12:05-13:20

89 11	S001	Optical image quality of two toric extended depth of focus intraocular lenses based on wavefront engineering technology
9		<u>Martina Vacalebre</u> , Elena Anastasi, Renato Frison, Simon Federico Spanò, Benedetta Castroflorio, Maria Cristina Curatolo (Italy)
90 1	S002	Evaluation of a virtual reality headset at a tertiary care ophthalmology setting <u>Catherine Dang</u> ¹ , Hong-An Nguyen ¹ , Soumya Podury ¹ , Matthew Quinn ¹ , Catherine Tsilfidis ¹ , Rustum Karanjia ^{1,2} (¹ Canada, ² USA)
91 rf	S003	Defocus incorporated mulitiple segment spectacle lenses for myopia control: a retrospective study in a Turkish cohort Nilay Akagun , Emrah Altiparmak (Türkiye)
170 1	S004	Association between building density and screening myopia in children and adolescents: a five-year longitudinal study from China Jingjing Wang, Xiangui He (China)
173 1	S005	Visual activity enhances neuronal excitability in thalamic relay neurons <u>Aurore Aziz</u> , Dumenieu Mael, Fronzaroli-Molinieres Laure, Naudin Lois, Bonnaure Cecile, Wakade Anushka, Zanin Emilie, Ankri Norbert, Incontro Salvatore, Denis Daniele, Marqueze Beatrice, Brette Romain, Debanne Dominique, Russier Michael (France)
190	S006	Comparison of refractive errors in patients with Parkinson's disease and normal people <u>AbbasAli Yekta</u> , Reyhaneh Shariati, Mehdi Khabazkhoob, Ali Shoeibi, Hadi Ostadimoghaddam, Akbar Derakhshan, Hasan Hashemi, Javad Heravian Shandiz, Asieh Ehsaei, Abbas Azimi Khorasani, Reihaneh Yekta, Yeganeh Yekta (Iran)
212 <i>rf</i>	S007	Use of L-tyrosine supplementation to support retinal function in a mouse model of deprivation myopia <u>Bartosz Machna</u> , Klaudia Mroz, Monika Katan, Anna Gasiorek, Anna Pacwa, Maciej Oseka, Mikołaj Górka, Joanna Lewin-Kowalik, Adrian Smedowski (Poland)
268	S008	The relationship between the cellular retinal structure measured with adaptive optics scanning laser ophthalmoscope and retinal function measured with multifocal electroretinogram in late-onset retinal degeneration Stephanie Quinn, Penny Lawton, Andrew Browning, Laura Young (United Kingdom)
330 rf	S009	Influence of head movement of fixation stability and eye angle changes during virtual reality perimetry <u>Hsin-yang Chen</u> ¹ , Raphael Sznitman ¹ , Jan Darius Unterlauft ² , Martin Zinkernagel ¹ , Nathanael Urs Häner ¹ ('Switzerland, ² Germany)
359 rf	S010	Assessing retinal function in an Alzheimer´s disease mouse model APPNL-F/NL-F using electroretinography Lidia Sánchez-Puebla ¹ , Santiago Milla Navarro ¹ , Inés López-Cuenca ¹ , José A. Matamoros ¹ , Elena Salobrar-Garcia ¹ , José A. Fernández-Albarral ¹ , Lorena Elvira-Hurtado ¹ , Ana I. Ramírez ¹ , Juan Jose Salazar ¹ , Takaomi C. Saido ² , Takashi Saito ² , Carmen Nieto-Vaquero ¹ , María Ángeles Moro ¹ , Rosa De Hoz ¹ , Pedro De La Villa ¹ , Jose Manuel Ramirez ¹ (¹ Spain, ² Japan)
397	S011	Quantitative analysis of retinal vasculature in patients with autoimmune connective tissue disorders by retinal vessel analysis Dmitri Artemiev, Maraarita Todorova (Switzerland)

•

SATURDAY 11 OCTOBER 2025

28th EVER 9-11 October 2025 EVER Florence CONGRESS

427	S012	Early pupillary dysfunction in optic neuropathies detected by chromatic pupillometry <u>Rocco Mastromartino</u> ¹ , Martial Geiser ² , Fabian D'Apolito ¹ , Michele D'Ambrosio ¹ , Andrea Cusumano ¹ , Benedetto Falsini ⁵ (¹ Italy, ² Switzerland, ³ USA)
471	S013	Variability and age-related changes in retinal layer thicknesses in healthy individuals - correlation with loss of flicker and chromatic sensitivity <u>Aiman Hafeez</u> , Alison Binns, Irene Ctori, John L. Barbur (United Kingdom)
525	S014	Retinal colour vision: revisiting the limits of retinal mechanisms in colour perception Sohail Daniel (United Kingdom)
581 ர	S015	Retina-brain neurovascular coupling connection <u>Rui Bernardes</u> ¹ , João Jordão ¹ , João Figueira ¹ , Miguel Morgado ¹ , Pedro Guimarães ¹ , Pedro Serranho ¹ , Delia DeBuc ² , Michel Paques ³ , Miguel Castelo-Branco ¹ (¹ Portugal, ² USA, ³ France)
626 rf	S016	The pulvinar's role in visual hierarchy communication and cortical integration Christian Casanova, William Thomas, Nelson Cortes Hernandez (Canada)
639 rf	S017	Comparative performance of six large language models in the self-assessment test of the American Academy of Ophthalmology <u>Andrea Taloni</u> , Antonia Carmen Sangregorio, Filippo Lixi, Mario Troisi, Francesco Paolo Mancini, Valerio Calabresi, Feyza Çukurova, Raphael Kilian, Valentino De Ruvo, Luigi De Rosa, Giulia Coco, Massimo Busin, Giuseppe Giannaccare (Italy)
677 rf	S018	Evidence for altered color adaptation in autism spectrum disorder Miguel Castelo-Branco, João Castelhano, Francisca Matias (Portugal)
691	S019	Age-related changes in cone-mediated dark adaptation <u>Beatriz Sánchez Gavilán</u> , Maria Cinta Puell Marin, Shrinivas Pundlik (USA)

POS Poster Session PBP

0

129	S020	Implementation of and ex vivo assay for corneal permeation and irritation: evaluation of proparacaine hydrochloride as a case study <u>Natalia Carolina Gonzalez Jimenez</u> , Yolima Baena Aristizabal, Maria Lozano Alvarez (Colombia)
130	S021	Multiple neural pathways light-independently drive TH2 wide-field amacrine cells in the developing and mature retina Dao-Qi Zhang, Wenqiu Wang (USA)
193 rf	S022	Comparative proteomic analysis of aqueous humour, anterior capsules and crystalline lenses in different human cataract subtypes versus healthy controls <u>Christina Karakosta</u> ^{1,2} , Martina Samiotaki ¹ , Anastasios Bisoukis ² , Nantieznta Kyriakidou ¹ , Konstantinos Moschou ¹ , Marilita Moschos ¹ (1Greece, 2United Kingdom)
224	S023	Pharmacogenomics of steroid-induced ocular hypertension <u>Stephen Schwartz</u> , Zeyuan Song, Satyabrata Pany, Jonathan Huang, Tatsuo Itakura, Arpan Mazumder, Anastasia Gurinovich, Francis Price, Jr., W. Daniel Stamer, Srinivasan Senthilkumari, Colin Willoughby, Ronnie George, Srujana Chitipothu, Sudha Iyengar, Paola Sebastiani, Marianne Price, M. Elizabeth Fini (USA)
286 rf	S024	Protective effects and mechanism of modified Qiju Dihuang Formula in experimental choroidal neovascularisation rats Leilei Wang, Xiaoling Fang, Xia Chen, Wenwen Xue, Jiannan Huang, Xiaowei Tong (China)

000 • • . 000 0 0 . • 0 0 0 0 0 0 0 0 ۲ 0 0.0.0 . • 0 0 . 00 -----• 0 e • 0000 • 0 0 0000 0.00.0 --. 0 0 . 0

288	S025	Magnetically actuated and biodegradable robotic intraocular dexamethasone implants <u>Erdost Yıldız</u> ¹ , Ugur Bozuyuk ¹ , Eray Yildiz ² , Fan Wang ¹ , Mertcan Han ¹ , Alp Karacakol ¹ , Devin Sheehan ¹ , Yan Yu ¹ , Metin Sitti ¹ (¹ Germany, ² Turkye)
314	S026	Re-evaluating the role of preservative-containing eyedrop formulations: a review of recent data Cindy M.L. Hutnik ¹ , Andrew J. Tatham ² , <u>Andrzej Grzybowski</u> ³ , José António Dias ⁴ , Pedro Corsino Fernández Vila Fernández Vila ⁵ (¹ Canada, ² United Kingdom, ³ Poland, ⁴ Portugal, ⁵ Spain)
329	S027	Patient perspectives on handling single dose versus multi-dose eye drops José António Dias, Joao Filipe, Nuno Lopes, Mario Cruz, Paulo Margarido (Portugal)
361 <i>rf</i>	S028	SPARC initiates gliosis via integrin α5β3/FAK/ERK signaling and mitochondrial dysfunction in early diabetic retinopathy <mark>Shubhrajit Barman</mark> , Senthil Kumar Ganesan (India)
392 rf	S029	An in-depth overview on retinal morpho-functional and molecular features of the 5xFAD murine model <u>Lorenzo Guidotti</u> , Martina Lucchesi, Rosario Amato, Giuseppe Neri, Silvia Marracci, Claudia Gargini, Ugo Borello, Maurizio Cammalleri, Giovanni Casini, Massimo Dal Monte (Italy)
406	S030	Local thyroid hormone system in retinal cell resilience to metabolic stress Rosario Amato (Italy)
407 1	SO31	Astrocyte-mediated protection of the hypoxic retina: involvement of beta3-adrenoceptors <u>Alessio Canovai</u> , Lorenza Di Marsico, Massimo Dal Monte, Paola Bagnoli, Maurizio Cammalleri (Italy)
416	S032	Rescruing mitochondria functioning by antioxidant agent to prevent the onset of age-related macular degeneration Darin Zerti, Luigi Donato, Ignacio Babiloni Chust, Giulia Carozza, Rosalia D'Angelo, Lucia Poggi, Maurizio Passacantanto, Rita Maccarone (Italy)
419	S033	Early retinal involvement in amyotrophic lateral sclerosis: functional and molecular characterization in SOD1G93A mice
rf		Lorenza Di Marsico, Eleonora Daghini, Rosario Amato, Angela Cannavale, Alessio Canovai, Giuseppe Neri, Ugo Borello, Claudia Gargini, Maurizio Cammalleri, Massimo Dal Monte (Italy)
434 rf	S034	Single oral dose of dronabinol enhances optic nerve head blood flow in patients with glaucoma <u>Gerhard Garhöfer</u> , Theresa Lindner, Viktoria Pai, Marihan Abensperg-Traun, Leopold Schmetterer, Doreen Schmidl (Austria)
438 ர	S035	Shear-stress dependent viscous properties of hyaluronic-based lubricants Leopold Schmetterer, Gerhard Garhöfer (Austria)
454 ர	S036	Toxicity of tranexamic acid in Müller cells: oxidative stress and inflammatory pathways Dammak Azza, Nadine Gubernath, Wolf Armin (Germany)
488	S037	Global trends in climate change and sustainability in ophthalmology literature Anna March De Ribot, Francesc March De Ribot (New Zealand)
510	S038	Extracellular vesicle therapy for sepsis-induced neurodegeneration: influence of host sex and transplant compatibility <u>Jhoana Abigail Guarnizo-Campoverde</u> , Kristy Tatiana Rodríguez Ramírez, David García Bernal, Fernando Lucas-Ruiz, Jesus Isais Gil Chinchilla, Caridad Galindo-Romero, Maria José Ruiz- Pastor, Marta Agudo-Barriuso (Spain)
529	S039	Spatiotemporal characterization of advillin retinal ganglion cell degeneration following optics nerve injury <u>Manuel Salinas-Navarro</u> , José Antonio Gómez-Sánchez, Andreea Delia Necula, Juan Sáez- Sánchez, Manuel Vidal-Sanz, Marcelino Avilés-Trigueros (Spain)

SATURDAY 11 OCTOBER 2025

28th EVER 9-11 October 2025 Florence CONGRESS

566 ர	S040	Safety and neuroprotective effects of intravitreal transplatation of bone-marrow-derived mononuclear cells exosomes to animal model of retinal degeneration Johnny Di Pierdomenico, Ana Martínez Vacas, Andreea Delia Necula, David García Bernal, Maria Paz Villegas Perez, Diego García-Ayuso (Spain)
570 rf	S041	Corneal endothelium protective effect of taurine-based ophthalmic surgical devices <mark>Francesca Lazzara</mark> , Federica Conti, Grazia Maugeri, Erika Giuffrida, Claudio Bucolo (Italy)
572	S042	Design of selective PI3K delta inhibitors for diabetic retinopathy Chiara Bianca Maria Platania, Carmela Bonaccorso, Cristina Munzone, Isabel La Rosa, Francesca Lazzara, Claudio Bucolo (Italy)
616	S043	Ocular disposition of bio-therapeutics and the role of peptide transporters in blood ocular barriers Tapas Roy, Nabanita Halder, Rohit Saxena, Thirumurthy Velpandian (India)
617	S044	Investigating the cellular impact of silicone oil exposure in retinal cells: insights from cone oil droplet in vertebrate retina <u>Dammak Azza</u> , Lara Catherine Kutschbach, Wolf Armin (Germany)
620	S045	Dual serotoninergic ligand exerts protective effect in an in vitro model of blood retinal barrier breakdown Claudio Bucolo, Chiara Bianca Maria Platania, Francesca Lazzara (Italy)
683	S046	Cigarette smoking and ocular diseases <mark>Zahra Javdani</mark> , Frank Goes, Guido Vanhal, Deborah Herrera (Belgium)
704	S047	A preclinical tool for proliferative retinopathy and retinal fibrosis based on a mouse model of pericyte immaturity Nekane Maritorena-Hualde, Catalina Prats-Lluís, Hielke Van Splunder, Anabel Martínez- Romero, Xavier Vallvé, Emma Cerrato, Ana Méndez, Luis Arias-Barquet, Eloi Montañez, Mariona Graupera, Pilar Villacampa (Spain)

POS Poster Session RV

97	S048	Photobiomodulation as protective strategy against hydrogen peroxide induced oxidative stress and mitochondrial dysfunction in retinal pigment epithelial cells Zehra Canbulat, Ayse Dilara Aydemir, Murat Hasanreisoğlu (Türkiye)
100	S049	OCT-A as a highly sensitive biomarker to study retinal change in the early phase of Alzheimer's disease Claudio Iacobucci, Bernardo Billi, Eleonora Lacorte, Patrizia Lorenzini, <u>Paola Piscopo</u> , Anna Elisa Castellano (Italy)
124 rf	S050	Bone morphogenetic protein signaling and retinal fibrosis <u>Mohamed Al-Shabrawey</u> 1, Sonali Sharma1, Ikbal Karkoukli1, Alee Asaaf1, Muhammad Haque1, Gieth Alahdab1, Mohamed Tarek1,2, Yuji Mishina1 (1 ¹ USA, ² Egypt)
157 rf	S051	Biodegradable ultrathin nanofibrous carrier for retinal tissue engineering: optical, mechanical and degradation properties <mark>Hana Studenovska</mark> , Mourad Souibgui, Jitka Nováčková, Vladimír Proks, Jiří Hodan, Věra Cimrová (Czech Republic)
171 rf	S052	Diabetes and diabetic retinopathy in Finland during 2000-2017 based on nationwide survey and register data Petri Purola, Seppo Koskinen, Hannu Uusitalo (Finland)
192	S053	Beyond the algorithm: challenges and future paths in ai-driven geographic atrophy segmentation <u>Eirini Maliagkani</u> ¹ , Aikaterini Chatzara ¹ , Dimitra Mitsopoulou ² , Andreas Katsimpris ² , Ioannis Apostolopoulos ¹ , Elpiniki Papageorgiou ¹ , Ilias Georgalas ¹ ('Greece, ² United Kingdom)

196	S054	Uveal effusion and serous retinal detachment following cataract surgery in a patient with nanophthalmos <mark>Konstantinos Tyrlis,</mark> Paraskevi Kotrogianni, Thomas Chontos, Constantine Angelidis, Ilias Georgalas (Greece)
197	S055	Golgman Favre syndrome complicated with choroidal neovascularisation: case series Amira Mabrouk, Nabi Wijdene, Boubaker Cyrine, Khochtali Sana, Jelliti Bechir (Tunisia)
203	S056	From skin to sight: sequelae in Hansen's disease <mark>Maria Piedrahita, Eduardo Cadena, Maria Estevez, Felipe Moreno, Fernando Godin</mark> (Colombia)
206 rf	S057	<i>Escherichia coli</i> Nissle 1917 as an adjuvant therapy reduces inflammation severity in experimental autoimmune uveitis
9		<u>Klara Dusova</u> , Petra Prochazkova, Aneta Klímová, Monika Rova, Nikolina Canova, Jarmila Heissigerova, Miloslav Kverka, Radka Roubalova, Janet Jezkova, Michaela Brichova, Petra Svozilkova (Czech Republic)
214	S058	Follow-up report of a case of focal choroidal excavation secondary to COVID-19 infection Leilei Wang, Xiaoling Fang, Xia Chen, Wenwen Xue, Jiannan Huang, Xiaowei Tong (China)
216	S059	Macular pigmentary changes in diabetic eyes without diabetic retinopathy Alessandro Arrigo, Emanuela Aragona, Gianpaolo Zerbini, Pasquale Aragona, Francesco Bandello (Italy)
217 rf	S060	Retinal vascular changes in mild cognitive impairment using SD-OCT angiography: pilot study Lorena Elvira-Hurtado, Inés López-Cuenca, Lidia Sánchez-Puebla, José A. Matamoros, José A. Fernández-Albarral, Mario Salas-Carrillo, Pedro Gil, Ana Isabel Ramirez, Juan Jose Salazar, Rosa De Hoz, Jose Manuel Ramirez, Elena Salobrar-Garcia (Spain)
221 rf	S061	Detecting retinal alterations in vascular dementia using OCT and OCTA <u>Lorena Elvira-Hurtado</u> , Inés López-Cuenca, Lidia Sánchez-Puebla, José Antonio Matamoros, José A. Fernández-Albarral, Mario Salas-Carrillo, Pedro Gil, Ana I. Ramírez, Juan Jose Salazar, Rosa De Hoz, Jose Manuel Ramirez, Julian Garcia Feijoo, Elena Salobrar-Garcia (Spain)
222 ர	S062	Evaluation of two novel riboflavin-based dyes for safe and effective vitreoretinal staining Mario Troisi, Ciro Caruso, Carmine Ostacolo, Ciro Costagliola (Italy)
239	S063	Deep learning-based evaluation of heavy liquid-assisted retinal flattening on postoperative anatomical retinal reattachment in macular-involving rhegmatogenous retinal detachment treated with pars plana vitrectomy Yan Gong, Meng Li (China)
251	S064	Advancing retinal imaging with artificial intelligence: evaluating performance in geographic atrophy segmentation Aikaterini Chatzara ¹ , Eirini Maliagkani ¹ , Dimitra Mitsopoulou ² , Andreas Katsimpris ² , Ioannis Apostolopoulos ¹ , Elpiniki Papageorgiou ¹ , Ilias Georgalas ¹ (¹ Greece, ² United Kingdom)
263	S065	Bleeding honeycomb - A rare case of malattia leventinese Inês Ludovico, Pedro Lopes, Joana Ferreira, Maria Elisa Luís, Rita Anjos (Portugal)
284	S066	Single-center evaluation of response to treatment with intravitreal faricimab injections in cases with neovascular age-related macular degeneration <u>Stamatina Kabanarou</u> , Nikolaos Bitzanakis, Petros Fragkiskos, Christina Garnavou-Xirou, Evgenia Kontou, Ilias Gkizis, Tina Xirou (Greece)
290	S067	Automated quantification of macular perfusion in Behçet's uveitis using optical coherence tomography angiography Cigdem Ardic¹, Almila Sarigul Sezenöz¹, <u>Erdost Yıldız</u>², Sirel Gür Güngör¹ (¹Turkye, ²Germany)

SATURDAY 11 OCTOBER 2025

28th EVER 9-11 October 2025 Florence CONGRESS

000000.00.00

311 <i>rf</i>	S068	Long-term outcomes of bilateral injection of lenadogene nolparvovec gene therapy for leber hereditary optic neuropathy <u>Nancy Newman</u> ¹ , Patrick Yu-Wai-Man ² , Prem Subramanian ¹ , Sarah Thornton ¹ , An-Guor Wang ³ , Sean Donahue ¹ , Bart Leroy ⁴ , Valerio Carelli ⁵ , Valérie Biousse ¹ , Catherine Vignal-Clermont ⁶ , Alfredo Sadun ¹ , Robert Sergott ¹ , Gema Rebolleda Fernández ⁷ , Bart Chwalisz ¹ , Rudrani Banik ¹ ,
315	S069	Magali Taiel ⁶ , José-Alain Sahel ¹ (¹ USA, ² United Kingdom, ³ Taiwan, ⁴ Belgium, ^s Italy, ⁶ France, ⁷ Spain) Innovative automated imaging approach for quantitative analysis of retinal glial cells <u>Lidia Sánchez-Puebla</u> , Miguel A. Sánchez-Puebla, Ana Granados, Valentín Moreno, Ana Isabel Ramirez, Jose Manuel Ramirez, Juan Llorens, Inés López-Cuenca (Spain)
322	S070	Lower retinal arteriolar and venular fractal dimension are associated with higher risk of incident dementia - The UK Biobank (n = 65,727) <u>Frank van der Heide</u> ¹ , Anthony Khawaja ² , Seray van Montfort ¹ , Archana Singh-Manoux ¹ , Pearse Keane ² , Dan Milea ¹ (¹ France, ² United Kingdom)
323	S071	Relationship of macrophage-like cells and retinal ganglion cells in healthy eyes <u>Matteo Belletti</u> ^{1,2} , Ester Carreño Salas ² , Francesco Pichi ^{3,4} (¹ Italy, ² Spain, ³ United Arab Emirates, ⁴ USA)
335	S072	The enigma of frosted branch angiitis: an unexpected challenge in hematologic malignancies Arturo Real Arellano, Bruno Taboada Moreno (Mexico)
338	S073	A deep learning algorithm for classifying diabetic retinopathy using optical coherence tomography angiography Gahyung Ryu (South Korea)
344	S074	Evaluating annotation efficiency and consistency in autofluorescence imaging: a comparison of tools <u>Adam Threlfall</u> , Barbra Hamill, Catherine Jamison, Alan Anderson, Enrico Pellegrini, Kereen Johnston, Iain Gourlay, Niall Strang, Tom MacGillivray, Gavin Robertson (United Kingdom)
362	S075	Retrofoveolar neovascular AMD complication: FARICIMAB(Vabysmo) injections(IVT) treatment with PROREACTIVE protocol Corinne Gonzalez (France)
364 1	S076	Structural, morphology and evolution study of AMD drusenoid deposits with OCT and morphology-structural software Corinne Gonzalez (France)
366	S077	Intravenous thrombolysis in central retinal artery occlusion: a case report <u>Chrysa Agapitou</u> , Alexia Risi-Koziona, Stamatios Lampsas, Panagiotis Theodossiadis, Irini Chatziralli (Greece)
367	S078	Microvascular changes on the macula and optic disc in patients with type 1 diabetes mellitus Alexia Risi-Koziona, Chrysa Agapitou, Stamatios Lampsas, Konstantinos Pappelis, Panagiotis Theodossiadis, Irini Chatziralli (Greece)
369 rf	S079	Randomized, controlled study to investigate the efficacy and safety of resveratrol vitamin supplements in patients with non-proliferative diabetic retinopathy without macular edema (REVOLUTION study) <u>Chrysa Agapitou</u> , Alexia Risi-Koziona, Eleni Dimitriou, Stamatios Lampsas, Panagiotis Theodossiadis, Irini Chatziralli (Greece)
376	S080	Detection of choroidal neovascularization using swept-source optical coherence tomography angiography after half-fluence photodynamic therapy in chronic central serous chorioretinopathy: a three-year follow-up <u>Inmaculada Herrero Sanchez</u> , Olivia Esteban, Pablo Tejada González, Edurne De La Cámara Sahuquillo, Ana María Abad Pascual, Javier Ramos Duarte, Luca Manuel Bueno Borghi, Cristina Calvo Simón, Carla Sánchez Remacha, Julia Aramburu Clavería, Miguel Castillo Fernández, Marta Suñer Martínez, Francisco Javier Ascaso (Spain)
378	S081	Long-term visual outcomes in complete susac syndrome: a 15-year follow-up Ariadna Garreta-Rafecas, Elena Milla (Spain)

389	S082	Optimisation of the daily living tasks dependent on vision questionnaire in the setting of patients being treated for macular diseases <u>Francis Sanders</u> , Eirini Skiadaresi, Colm Mcalinden (United Kingdom)
390	S083	Outcome of different surgical repair techniques for rhegmatogenous retinal detachment - A health economic analysis in the Split-Dalmatia County, Croatia <u>Ivan Borjan</u> ¹ , Ivna Plestina-Borjan ¹ , Silvia N. W. Hertzberg ² , Alen Sinicic ¹ , Ljubo Znaor ¹ , Beáta Éva Petrovski ² , Goran Petrovski ² (¹ Croatia, ² Norway)
391 <i>rf</i>	S084	Early onset progressive loss of rod bipolar cells accompanied by ubiquitin punctae in Cln3delta7/8 mice Tommi Torsti, Kai Kaarniranta, Anu Kauppinen, Markus M. Forsberg (Finland)
394	S085	Retinal layers in parkinson's disease: preliminary OCT biomarker analysis <mark>Alessandra Mancini</mark> , Giovanna Carnovale Scalzo, Massimiliano Borselli, Domenico Chisari, Lorenzo Rijillo, Luca Bifezzi, Maria Angela Romeo, Armando Celia, Raffaella Gioia, Andrea Lucisano, Vincenzo Scorcia, Gennarina Arabia, Aldo Quattrone, Adriano Carnevali (Italy)
398	S086	3 years of functional recovery quantified by multifocal electroretinogram after macular hole surgery <u>Thibaud Garcin</u> , Nicolas Abihaidar, Houssem Fadli, Mathilde Kaspi, Borderie Vincent, Nacim Bouheraoua (France)
436	S087	Transplantation of human iPSC-derived RPE cells with the corrected MERTK mutation into minipig eyes <u>Taras Ardan</u> ¹ , Slaven Erceg ² , Anna Brýmová ¹ , Hana Studenovska ¹ , Brigitte Mueller ³ , Knut Stieger ³ , Goran Petrovski ^{4,5} , Lyubomyr Lytvynchuk ³ , Zbyněk Straňák ¹ , Miroslav Veith ¹ , Štefan Juhás ¹ , Jana Juhasová ¹ , Yaroslav Nemesh ¹ , Zdeňka Ellederová ¹ , Jan Motlik ¹ (¹ Czech Republic, ² Spain, ³ Germany, ⁴ Norway, ⁵ Croatia)
440	S088	Lutein-in-extra-virgin-olive-oil as a peroral intervention in an animal model of retinopathy of prematrutity <u>Xiaoyuan Ye</u> ¹ , Kwok Fai So ¹ , Jetty Chung Yung Lee ¹ , Wai Ching Lam ² , Amy Cheuk Yin Lo ¹ (¹ China, ² Canada)
442 rf	S089	Impact of ectopic internal retinal layers in postoperative outcomes of idiopathic epiretinal membrane João Castro Cabanas, Daniel Ferreira Cardoso, Pedro Martins, Catarina Ferreira, Filipe Sousa Neves, Miguel Bilhoto, Paula Sepúlveda (Portugal)
447	S090	Evaluating the consequences of appointment delays on AMD progression at the Western Eye Hospital during the COVID-19 lockdown <u>Inés López-Cuenca</u> ¹ , Lorenzo Fabozzi ² , Saad Younis ² , Ahmad Ali ² , Francesca Cordeiro ² (¹ Spain, ² United Kingdom)
463	S091	Tackling macular edema and dislocated IOL: the fluocinolone-loaded iOL with scleral suspension (FLISS) technique <u>Pedro Martins</u> , João Castro Cabanas, Daniel Ferreira Cardoso, Miguel Bilhoto, Paula Sepúlveda, Filipe Sousa Neves (Portugal)
475	S092	Retinal and choroidal vascular parameters in patients with Raynaud's syndrome assessed by SS-OCT and OCT-A: a cross-sectional study <u>Edurne De La Cámara Sahuquillo</u> , Olivia Esteban, Inmaculada Herrero Sánchez, Pablo Tejada González, Ana María Abad Pascual, Javier Ramos Duarte, Cristina Calvo Simón, Luca Manuel Bueno Borghi, Carla Sánchez Remacha, Julia Aramburu Clavería, Miguel Castillo Fernández, Marta Suñer Martínez, Francisco Javier Ascaso (Spain)
476	S093	Subthreshold micropulse laser for central serous chorioretinopathy: functional and anatomical outcomes <u>Pablo Tejada González</u> , Inmaculada Herrero Sanchez, Edurne De la Camara Sahuquillo, Luca Manuel Bueno Borghi, Carla Sanchez Remacha, Cristina Calvo Simon, Miguel Castillo Fernández, Julia Aramburu Claveria, Marta Suñer Martinez, Ana Maria Abad Pascual, Javier Ramos Duarte, Olivia Esteban, Francisco Javier Ascaso (Spain)

481	S094	Evaluation of macular and optic disc nerve blood flow velocity in acute central serous chorioretinopathy measured with laser speckle flowmetry Bogumiła Sędziak-Marcinek, Adam Wylegala, Natalia Lange, Jarosław Piłat, Edward Wylegala (Poland)
485	S095	Alpha-melanocyte-stimulating hormone protects neurons by inhibiting ferroptosis in experimental retinal ischemia/ reperfusion injury Lu Xiang ¹ , Andrew Taylor ² , Amy Cheuk Yin Lo ¹ (¹ China, ² USA)
489	S096	Pars plana vitrectomy in optic pit maculopathy Luise Grajewski, Beate Wittkowski, Lothar Krause (Germany)
491	S097	Artificial intelligence in the treatment of diabetic retinopathy: a scoping review Muneeb Ahmad Khan, Diya Baker (United Kingdom)
515	S098	Microvascular remodeling in macular edema secondary to retinal vein occlusion Amina El Mayel, Mohamed Ben Hadj Khelifa, Rim Kmiha, Ghassen Marzouk, Amel Chebbi (Tunisia)
531	S099	Unilateral macular edema with mild inflammation: Look for the virus! <u>Aurelie Le</u> , Majda Rachdi, Youssef Afifi, Maria Fernanda Flores Herrera, Dorine Makhoul, Younes Azzagnuni (Belgium)
550	\$100	Resolution of submacular hemorrhage treated with intravitreal tissue plasminogen activator, pneumatic displacement, and faricimab – a case report Olgierd Duchniewicz, Michał Orski (Poland)
583	S101	Management of persistent macular hole retinal detachment following wide-based inverted internal limiting membrane flap surgery in high myopia (mean axial length 30 mm): a modified surgical approach <u>Howard Wen-Haur Chao</u> ¹ , Windsor Chao ¹ , Penbai Haui ² , Cheng-Kuo Cheng ² , Hsiao-Ming Chao ² (¹ United Kingdom, ² Taiwan)
595	\$102	Investigating vision-related quality of life and functionality in patients with low vision <mark>Anna Nikolaidou</mark> , Stavroula Almpanidou, Persefoni Talimtzi, Diamantis Almaliotis, Vasileios Karampatakis (Greece)
621	S103	Predictive factors of final visual outcome in patients with Leber hereditary optic neuropathy treated with lenadogene nolparvovec gene therapy <u>Piero Barboni</u> ¹ , Nancy Newman ² , Valérie Biousse ² , Patrick Yu-Wai-Man ³ , Valerio Carelli ¹ , Catherine Vignal-Clermont ⁴ , Constant Josse ⁵ , Magali Taiel ⁵ , José-Alain Sahel ⁶ , Robert Sergott ⁶ (¹ Italy, ² USA, ³ United Kingdom, ⁴ France, ⁶ USA)
630	S104	Choroidal calcification revealing phosphocalcic metabolism disorder <mark>Rym Maamouri, Ben Nacef Ibtissem, Aouni Jaafer, Rojbani Eya, Maaloul Sahar, Monia Cheour</mark> (Tunisia)
643	S105	Acute retinal necrosis: a retrospective evaluation of four cases Eda Gumrukcuoglu, Sedat Özmen (Türkiye)
651	S106	The proteome signatures of the retinal cellular response to psychosocial stress <u>Caroline Manicam</u> , Franziska Neubauer, Norbert Pfeiffer, Marianne Müller, Natarajan Perumal (Germany)
668	S107	Diagnostic value of swept-source optical coherence tomography angiography in retinal lipemia <u>Saoussen Chebbah</u> , Bouraoui Rim, Taha Koutheir Bizani, Mohamed Hassen Ben Salem, Iness Hachicha, Khaled El Matri, Chebil Ahmed, Rim Limaiem (Tunisia)
693	S108	MicroRNA-21 (miR-21) as a new player in retinal fibrosis Manuela Bartoli (USA)

702	S109	Management of type 1 idiopathic macular telangiectasia <u>Saoussen Chebbah</u> , Yasmine Houmane, Taha Koutheir Bizani, Emna Baklouti, Fatma Sakji, Rania Lazreg, Chebil Ahmed, Rim Limaiem (Tunisia)
703	S110	The unknown sign of concentric macular rings in albinism <u>Marta Caminal,</u> Jaume Catala, Jesus Diaz Cascajosa, Eduard Pedemonte, Albert Saladrigas, Santiago Conversa (Spain)
710	S111	Bidirectional association between coronary artery disease and exudative age-related macular degeneration: a nationwide cohort study in Korea Jee Myung Yang, Seung Won Lee (South Korea)
713	S112	Lipidomic profiling of murine models of photoreceptor degeneration reveals distinct fatty acid alterations <u>M.J. Ruiz-Pastor</u> , C. Sánchez-Castillo, L. Vidal-Gil, E. Missonnier, M. Pastor-Mas, M. Agudo-Barriuso, P. Lax, N. Cuenca (Spain)
